L'ebook ha l'obiettivo di fornire una panoramica complessiva della normativa europea volta al contenimento delle emissioni climalteranti al fine di consentire agli operatori di settore di orientarsi nel contesto giuridico anche grazie ad un approccio pratico e operativo. L'esigenza di arginare l'aumento delle temperature globali causato dalle emissioni antropogeniche di gas climalteranti è alla base di una serie di meccanismi di contenimento e riduzione delle emissioni di CO₂ che dopo la firma del protocollo di Kyoto e ancor più dopo gli accordi di Parigi sono stati implementati nel contesto europeo tra essi vi è il sistema EU ETS basato su un meccanismo cap and trade il cui scopo principale è quello di favorire la progressiva riduzione delle emissioni di gas a effetto serra attraverso il libero scambio delle quote di emissione su un mercato virtuale del carbonio. Nel presente volume si affronteranno tutti i principali aspetti teorici e operativi del sistema ETS con approfondimenti sui tre principali settori di riferimento: impianti industriali, trasporto aereo e trasporto marittimo, nonché sul sistema ETS 2 sul meccanismo CBAM e sui CDR carbon removals.
