i have been pleased with the favourable reception of the first edition of this book and i am grateful to have the opportunity to prepare this second edition in this revised and enlarged edition i corrected some misprints and errors that occurred in the first edition fortunately i didn't find too many and i added a large number of notes that give the reader an impression of what kind of results have been obtained since the first edition was printed and that give an indication of the direction the subject is taking many of the notes discuss or refer to papers discussing applications of the refinements that are considered of course it is the quantity and the quality of the insights and the applications that lend the refinements their validity although the guide to the applications is far from complete the notes certainly allow the reader to form a good judgement of which refinements have really yielded new insights hence as in the first edition i will refrain from speculating on which refinements of nash equilibria will survive in the long run to defend this position let me also cite binmore 1990 who compares writing about refinements to the herculean task of defeating the nine headed hydra which grew too heads for each that was struck off it is a pleasure to have the opportunity to thank my secretary marjoleine de wit who skilfully and as always cheerfully typed the manuscript and did the proofreading

mainstream economics considers individual preferences to be fixed and unchanging although psychologists and other social scientists explore how tastes are formed influenced and evolve it is not considered proper in orthodox economics to do so arguing about tastes makes the case that economists should abandon the principle that preferences are fixed and instead incorporate into their work how context and experience shape individual tastes david m kreps argues that the discipline must account for dynamic personal tastes when it comes to understanding social exchange emphasizing human resource management and on the job behavior he develops formal models that illustrate the power of intrinsic motivation and show why applying extrinsic incentives can be counterproductive kreps weighs the advantages and disadvantages of the principle *de gustibus non est disputandum* there is no arguing about tastes he calls for a new era of economics in which preferences are taken into account and not for granted arguing about tastes concludes with responses by the distinguished economists alessandra casella and joseph e stiglitz and a final reply by kreps

in order to survive as a social institution a firm needs a constitutional social contract even though implicit among its stakeholders this social contract must exist if an institution is to be justified the book focuses on two main issues to find out the terms of the hypothetical agreement among the firm's stakeholders in an ex ante perspective and to understand the endogenous mechanism generating appropriate incentives that induce to comply with the social contract itself as seen in the ex post perspective
