work one day catmull had a life changing realization a good animation was measured by whether or not the character on the screen made you believe it was a thinking being he decided he wanted to become an animator and create emotional characters catmull graduated with a double major in physics and computer science from the university of utah in his graduate program he met professor ivan sutherland a pioneer in computer graphics and director of the computer graphics program the program was funded by the advanced research projects agency arpa the creators of the first computer network arpanet which would later evolve into the internet arpa was developed as a response to the threat of the soviet sputnik satellite the first of its kind the u s felt threatened by soviet technological advancements and they developed arpa to stay up with the soviets to catmull the lesson to be learned from this was when the competition gets smart you need to get smarter catmull found enormous inspiration in the computer graphics program not only from the technology he was discovering but also from his fellow students the collaborative and creative atmosphere he experienced there was something he later tried to emulate at pixar in 1972 catmull made his first animated film a digitized model of his left hand hand became a reference for state of the art computer animation professor sutherland came up with the idea of an exchange program with disney disney would send an animator to the university of utah to learn about new technologies and the university would send one of their students to learn about storytelling catmull was sent to propose

this is an introduction to the mathematical theory which underlies subdivision surfaces as it is used in computer graphics and animation subdivision surfaces enable a designer to specify the approximate form of a surface that defines an object and then to refine it to get a more useful or attractive version a considerable amount of mathematical theory is needed to understand the characteristics of the resulting surfaces and this book explains the material carefully and rigorously the text is highly accessible organising subdivision methods in a unique and unambiguous hierarchy which builds insight and understanding the material is not restricted to questions related to regularity of subdivision surfaces at so called extraordinary points but gives a broad discussion of the various methods it is therefore an excellent preparation for more advanced texts that delve more deeply into special questions of regularity

the handbook of digital image synthesis is the most up to date reference guide in the rapidly developing field of computer graphics a wide range of topics such as applied mathematics data structures and optical perception and imaging help to provide a well rounded view of the necessary formulas for computer rendering in addition to this diverse approach the presentation of the material is substantiated by numerous figures and computer generated images from basic principles to advanced theories this book provides the reader with a strong foundation of computer formulas and rendering through a step by step process key features provides unified coverage of the broad range of fundamental topics in rendering gives in depth treatment of the basic and advanced concepts in each topic presents a step by step derivation of the

theoretical results needed for implementation illustrates the concepts with numerous figures and computer generated images illustrates the core algorithms using platform independent pseudo code
