life is about decisions decisions no matter if made by a group or an individual involve several conflicting objectives the observation that real world problems have to be solved optimally according to criteria which prohibit an ideal solution optimal for each decision maker under each of the criteria considered has led to the development of multicriteria optimization from its first roots which were laid by pareto at the end of the 19th century the discipline has prospered and grown especially during the last three decades today many decision support systems incorporate methods to deal with conflicting objectives the foundation for such systems is a mathematical theory of optimization under multiple objectives fully aware of the fact that there have been excellent textbooks on the topic before i do not claim that this is better text but it has a considerably different focus some of the available books develop the mathematical background in great depth such as snt85 gn90 jah86 others focus on a specific structure of the problems covered as zel74 ste85 mie99 or on methodology yu85 ch83a hm79 finally there is the area of multicriteria decision aiding roy96 vin92 kr93 the main goal of which is to help decision makers find the final solution among many optimal ones eventually to be implemented
