the final of three volumes providing students and practitioners in thermoplastics with either new information or a polish up of knowledge that has gotten dusty over the years explains the role of the mold in the injection molding process how it should be designed and built mold components and materials some of the more popular mold designs methods and equipment and design criteria for both the mold and the product the first two volumes appeared in 1996 and 1997 are available for 76 each and cover respectively fundamentals of the manufacturing process and material selection and product design the whole set is available for 220 it has no consolidated isbn annotation copyrighted by book news inc portland or

mold design is a decisive factor for the molding success such as dimensioning and location of the sprue gates dimensioning of shear edges flow aids cooling and ejector techniques etc this book may give you mould design basics how to make a mold design mould design standards which software is for mould design mold design solidworks how do you design for injection molding

this handbook was written for the injection molding product designer who has a limited knowledge of engineering polymers it is a guide for the designer to decide which resin and design geometries to use for the design of plastic parts it can also offer knowledgeable advice for resin and machine selection and processing parameters manufacturer and end user satisfaction is the ultimate goal

this work focuses on the factors critical to successful injection moulding including knowledge of plastic materials and how they melt the importance of mould design the role of the screw and the correct use of the controls of an injection moulding machine it seeks to provide operating personnel with a clear understanding of the basics of injection moulding resulting in more efficient processing reduced cycle times and better part quality with fewer rejects

injection moulding is one of the most important methods of manufacturing plastics products through the development of sophisticated micro processor control systems the modern injection moulding machine is capable of producing precision mouldings with close tolerances in large numbers and with excellent reproducibility this capability however is often limited by the lack of a proper appreciation of mould design the mould or tool as it is often called is at the heart of the injection moulding process its basic function is to accept the plastic melt from the injection unit and cool it to the desired shape prior to ejection it is not however simply a matter of the mould having an impression of the shape to be moulded many other factors have to be taken into account for example the ability to fill the mould impression properly and

efficiently without inducing weaknesses in the moulding and the efficient cooling of the moulding in order to maximise production rates without diminishing the quality of the moulding in addition the type of mould gate and runner system and ejection system which will best meet the needs of a particular job specification have to be determined in our experience lack of attention to such factors leads to the mould limiting the ability of the injection moulding machine and preventing the process as a whole from achieving its true potential

this thesis describe about the mold design for plastic injection molding process for two colors and the analysis of gate location in order to find the best gate location to apply it in to the design the molds for injection molding is not the cheap one it is expensive and needed an accurate step when apply the design on the mold because a slice mistake can follow by big loss first step is about finding the best gate location from several gate location have been choose but before that the design of the product and it materials should be choose after the analysis have done the collected data from several gate location will be compare in order to find best gate location and apply it in the mold design to designing mold the several system like runner system injector system and the ways material enter the mold will be considered
