important parts of development practice especially in key institutions such as the world bank are dominated by economists in contrast development studies is largely based upon multidisciplinary work in which anthropologists human geographers sociologists and others play important roles hence a tension has arisen between the claims made by development economics to be a scientific measurable discipline prone to wide usage of mathematical modelling and the more discursive practice based approach favoured by development studies the aim of this book is to show how the two disciplines have interacted as well as

how they differ this is crucial in forming an understanding of development work and to thinking about why policy recommendations can often lead to severe and continuing problems in developing countries this book introduces development economics to those coming from two different but linked perspectives economists and students of development who are not economists in both explaining and critiquing development economics the book is able to suggest the implications of these findings for development studies and more broadly for development policy and its outcomes

this innovative new text from jeffrey sachs and xiokai yang introduces students to development economics from the perspectives of inframarginal analysis and marginal analysis the book demonstrates how the new found emphasis on inframarginal analysis has influenced a shift back to an interest in classical economics from neoclassical economics. Inframarginal analysis vs marginal analysis is presented as a consistent theoretical framework throughout. It shows how the relationship of inframarginal analysis to marginal analysis has influenced the shift back to an interest in classical economics from neoclassical economics. With regard to economic development, it allows economists to reduce their overall reliance on marginal analysis which may be less relevant to development economics than it is to the economics of developed countries. It brings considerable analytic machinery to bear on important problems, a focus on institutions and transaction costs that is very relevant to development economics. It offers a thorough analysis of trade (chs 3-7) and macroeconomics (chs 16-19) both of which are not dealt with in depth by comparable textbooks.

the core of classical economic analysis represented by william petty and adam smith concentrated on the field of development economics this classical footing of the study of development is different from the neoclassical perspective in two important respects a it focuses on division of labor as the driving force of development and b it emphasizes the role of the market the invisible hand in exploiting productivity gains that are derived from division of labor however these aspects have received little attention in the body of literature that represents the modern field of development economics which largely represents the neoclassical application of marginalism a notable exception is research that utilizes inframarginal analysis of individuals

networking decisions in an attempt to formalize the classical mechanisms that drive division of labour this book is a first attempt to collect relevant key contributions and will be invaluable to active researchers in the field of development economics contents the origins of inframarginal applications to the study of economic development development strategies income distribution and dual structures urbanization entrepreneurship and the firm endogenous transaction costs and property rights investment endogenous growth and social experiments infrastructure labor surplus insurance and the trade off between leisure and income key features an excellent introduction to the emerging field of inframarginal economics a novel collection of key contributions in the field of inframarginal development economics provides an evolutionary perspective of the study of economic development readership academic economists
