holger bartolf discusses state of the art detection concepts based on superconducting nanotechnology as well as sophisticated analytical formulæ that model dissipative fluctuation phenomena in superconducting nanowire single photon detectors such knowledge is desirable for the development of advanced devices which are designed to possess an intrinsic robustness against vortex fluctuations and it provides the perspective for honorable fundamental science in condensed matter physics especially the nanowire detector allows for ultra low noise detection of signals with single photon sensitivity and ghz repetition rates such devices have a huge potential for future technological impact and might enable unique applications e g high rate interplanetary deep space data links from mars to earth
