diploma thesis from the year 2006 in the subject business economics law grade 1 5 nürtingen university wirtschaftsrecht language english abstract the rapidly developing economies in asia are undergoing unprecedented growth this explosive development has placed incomparable demands on the existing infrastructure in many countries governments struggle with the challenge of providing modern efficient and affordable infrastructure services for their people finding it difficult to finance what are often multimillion dollar projects on their own involving the private sector in the financing and operation of infrastructure promises several benefits for both parties to date the most common sub type of private participation in infrastructure is the bot build operate transfer model where a project company finances and constructs new infrastructure and operates that infrastructure over a long term period before it is transferred back to the government but despite the long history of projects of this type only a few are very successful and usually mean more costs than income to the companies for companies there is often the difficulty that risks are misjudged meaning that projects are either canceled completely or in case of overestimated risks the bidding price is much higher than the competitors which ultimately both lead to a loss of image and references on the other hand there are more than enough examples of risks being severely underestimated with the project turning out to be absolutely unprofitable and companies often have to face long and cost intensive legal disputes this turns especially fatal when construction companies are also under the sponsors investors of the project this dissertation looks first at private participation in infrastructure chapter 2 introduces the idea of private participation and the development in asia as well as the different forms of participation and the sectors of infrastructure the researched form

public private partnerships ppps refer to arrangements under which the private sector supplies infrastructure assets and infrastructure based services that traditionally have been provided by the government ppps are used for a wide range of economic and social infrastructure projects but they are used mainly

to build and operate roads bridges and tunnels light rail networks airports and air traffic control systems prisons water and sanitation plants hospitals schools and public buildings pppts offer benefits similar to those offered by privatization which is the sale of government owned enterprises or assets by the late 1990s when privatization was losing much of its earlier momentum pppts began to be widely seen as a means of obtaining private sector capital and management expertise for infrastructure investment after a modest start a wave of pppts is now beginning to sweep the world this special issue paper provides an overview of some of the issues raised by pppts with a particular focus on their fiscal consequences it also looks at government guarantees which are used fairly widely to shield the private sector from risk and are a common feature of pppts and it examines the consequences of pppts and guarantees for debt sustainability the paper concludes with a list of measures that can maximize the benefits and minimize the fiscal risks associated with the use of pppts various appendices augment the discussion by examining country experiences with pppts summarizing the statistical reporting framework used to discuss fiscal accounting and reporting explaining accounting for risk transfer examining how guarantees are modeled and estimated in chile and summarizing international accounting and reporting standards for contingent liabilities
