this book systematically synthesizes research achievements in the field of fuzzy neural networks in recent years it also provides a comprehensive presentation of the developments in fuzzy neural networks with regard to theory as well as their application to system modeling and image restoration special emphasis is placed on the fundamental concepts and architecture analysis of fuzzy neural networks the book is unique in treating all kinds of fuzzy neural networks and their learning algorithms and universal approximations and employing simulation examples which are carefully designed to help the reader grasp the underlying theory this is a valuable reference for scientists and engineers working in mathematics computer science control or other fields related to information processing it can also be used as a textbook for graduate

courses in applied mathematics computer science automatic control and electrical engineering

this classic introduction to the main areas of mathematical logic provides the basis for a first graduate course in the subject it embodies the viewpoint that mathematical logic is not a collection of vaguely related results but a coherent method of attacking some of the most interesting problems which face the mathematician the author presents the basic concepts in an unusually clear and accessible fashion concentrating on what he views as the central topics of mathematical logic proof theory model theory recursion theory axiomatic number theory and set theory there are many exercises and they provide the outline of what amounts to a second book that goes into all topics in more depth this book has played a role in the education of many mature and accomplished researchers
