this subject has been of great interest both to topologists and to number theorists the first part of this book describes some of the work of kuo tsai chen on iterated integrals and the fundamental group of a manifold the author attempts to make his exposition accessible to beginning graduate students he then proceeds to apply chen s constructions to algebraic geometry showing how this leads to some results on algebraic cycles and the abel jacobi homomorphism finally he presents a more general point of view relating chen s integrals to a generalization of the concept of linking numbers and ends up with a new invariant of homology classes in a projective algebraic manifold the book is based on a course given by the author at the nankai institute of mathematics in the fall of 2001

dynamical zeta functions are associated to dynamical systems with a countable set of periodic orbits the dynamical zeta functions of the geodesic flow of lo cally symmetric spaces of rank one are known also as the generalized selberg zeta functions the present book is concerned with these zeta functions from a cohomological point of view originally the selberg zeta function appeared in the spectral theory of automorphic forms and were suggested by an analogy between weil s explicit formula for the riemann zeta function and selberg s trace formula 261 the purpose of the cohomological theory is to understand the analytical properties of the zeta functions on the basis of suitable analogs of the lefschetz fixed point formula in which periodic orbits of the geodesic flow take the place of fixed points this approach is parallel to weil s idea to analyze the zeta functions of pro jective algebraic varieties over finite fields on the basis of suitable versions of the lefschetz fixed point formula the lefschetz formula formalism shows that the divisors of the rational hassc wcil zeta functions are determined by the spectra of frobenius operators on l adic cohomology

from the june 1998 summer school come 20 contributions that explore algebraic cycles a subfield of algebraic geometry from a variety of perspectives the papers have been organized into sections on cohomological methods chow groups and motives and arithmetic methods some specific topics include logarithmic hodge structures and classifying spaces bloch s conjecture and the k theory of projective surfaces and torsion zero cycles and the abel jacobi map over the real numbers

includes preprints of transactions of the american institute of electrical engineers issn 0096 3860

this book includes original peer reviewed research papers from the 2022 international conference on wireless power transfer icwpt2022 held in chongqing china the topics covered include but are not limited to wireless power transfer technology and systems coupling mechanism and electromagnetic field of wireless power transfer systems latest developments in wireless power transfer system and wide applications the papers share the latest findings in the field of wireless power transfer making the book a valuable asset for researchers engineers university students etc
