here is a uniquely modern approach to the study of physiological diversity that builds on
 the tradition established by c ladd prosser s comparative animal physiology responding
 to the need for a rigorously up to date comprehensive survey of function and integrative
 systems in a variety of species which is also easily accessible to the user dr prosser has
 delivered a thoroughly revised fourth edition in a convenient two volume format this
 carefully designed framework lets each volume zero in on distinct aspects of comparative
 physiology normally studied as a whole unit from the study of genetically replicating
 molecules to investigations of adaptive modulation these two companion volumes offer
 an all encompassing view of the field with their contemporary approach scholarly editing
 flexible format and detailed contents neural and integrative animal physiology and

environmental and metabolic animal physiology will stand together as the authoritative source in the field

metabolic ecology most of ecology is about metabolism the ways that organisms use energy and materials the energy requirements of individuals their metabolic rates vary predictably with their body size and temperature ecological interactions are exchanges of energy and materials between organisms and their environments therefore metabolic rate affects ecological processes at all levels individuals populations communities and ecosystems each chapter focuses on a different process level of organization or kind of organism it lays a conceptual foundation and presents empirical examples together the chapters provide an integrated framework that holds the promise for a unified theory of ecology the book is intended to be accessible to upper level undergraduates and graduate students but also of interest to senior scientists its easy to read chapters and clear illustrations can be used in lecture and seminar courses this is an authoritative treatment that will inspire future generations to study metabolic ecology
