camille flammarion 1842 1925 began his career at 16 as a human computer under the great mathematician u j j le verrier at the paris observatory he soon tired of the drudgery he was drawn to more romantic vistas and at 19 wrote a book on an idea that he was to make his own the habitability of other worlds there followed a career as france s greatest popularizer of astronomy with over 60 titles to his credit an admirer granted him a chateau at juvisy sur l orge and he set up a first rate observatory dedicated to the study of the planet mars finally in 1892 he published his masterpiece la planete mars et ses conditions d habitabilite a comprehensive summary of three centuries worth of literature on mars much of it based on his own personal research into rare memoirs and archives as a history of that era it has never been surpassed and remains one of a handful of indispensable books on the red planet sir patrick moore 1923 2012 needs no introduction his record of popularizing astronomy in britain in the 20th century equaled flammarion s in france in the 19th century moore pounded out hundreds of books as well as served as presenter of the bbc s tv program sky at night program for 55 years a world record though moore always insisted that the moon was his chef d oeuvre mars came a close second and in 1980 he produced a typescript of flammarion s classic unfortunately even he found

the project too daunting for his publishers and passed the torch of keeping the project alive to a friend the amateur astronomer and author William Sheehan in 1993 widely regarded as a leading historian of the planet Mars. Sheehan has not only meticulously compared and corrected Moore's manuscript against Flammarion's original so as to produce an authoritative text he has added an important introduction showing the book's significance in the history of Mars studies. Here results a book that remains an invaluable resource and is also a literary tour de force in which the inimitable style of Flammarion has been rendered in the equally unique style of Moore.

An H. J. Kramer book published in a joint venture with New World Library.

This course explores the scientific principles, natural processes, and human impacts that shape the environment. It covers key topics such as ecosystems, biodiversity, natural resources, pollution, climate change, and environmental policies. Students learn about sustainable development, practices, renewable resources, waste management, and strategies for reducing ecological footprints. The course emphasizes the importance of conservation, responsible consumption, and sustainable technologies for protecting the planet. Through case studies, field insights, and practical applications, learners gain the knowledge needed to address environmental challenges and promote long-term sustainability.

This book questions critically in novel ways and from various perspectives the possibilities of objectivity of legal theory in the 21st century.

Issues for Nov 1957 include section accessions. Annwinste Sept 1957.

presents a collection of papers discussing various hypotheses and models of planetary plumes.

Papers are presented concerning studies of lunar basalts, highland rocks, and meteorites. Specific topics include the petrology and chemistry of basaltic fragments from Apollo 11 soil, the composition, magma types, and petrogenesis of Apollo 17 high-ti mare basalts, the chemistry and probable origin of Apollo 15 green glass, experimental studies of the partitioning of nickel and chromium into olivine.
