the book presents eight well known and often used algorithms besides nine newly developed algorithms by the first author and his students in a practical implementation framework matlab codes and some benchmark structural optimization problems are provided the aim is to provide an efficient context for experienced researchers or readers not familiar with theory applications and computational developments of the considered metaheuristics the information will also be of interest to readers interested in application of metaheuristics for hard optimization comparing conceptually different metaheuristics and designing new metaheuristics

differential equations especially nonlinear present the most effective way for describing complex physical processes methods for constructing exact solutions of differential equations play an important role in applied mathematics and mechanics this book aims to provide scientists engineers and students with an easy to follow but comprehensive description of the methods for constructing exact solutions of differential equations

the ability to manage knowledge is relevant for millions of small and medium sized enterprises smes that operate in high tech environments they strongly depend on external knowledge about customers technologies and competitors because as opposed to large companies they have limited internal knowledge resources and little

power to control their business environments present km literature however mainly focuses on large companies and therefore does not explain how smes for example can successfully apply groupware data mining semantic networks and knowledge maps this book addresses this problem by introducing the concept of knowledge integration ki that places emphasis on the identification acquisition and use of external knowledge drawing from this theoretical basis the book presents concepts and instruments specifically designed for smes as well as examples of their implementation and use in practice
