bees that have inhabited the planet for over 100 million years are the common thread that tells the story of various ecological challenges such as the reduction of biodiversity climate change soil degradation and energy transition paradoxically agriculture is one of the major causes of irreversible and therefore unsustainable changes such as global warming and the extinction of pollinators from which it derives its benefits and wealth the massive use of fossil fuels the distribution of poisons such as pesticides persistent toxic and bioaccumulative the loss of fertility in monocultures of plants selected to satisfy economic needs are some of the main causes of an ecologically unsustainable food production system the book tries to show a different vision of the world we are building a story of backstories and underestimated dangers this book received two prizes steli di pace stems of peace by the union of european journalists and communicators in 2023 and it was the winner of the concorso nazionale per la divulgazione scientifica kerit lc edizioni national competition for science dissemination in 2024

on the verge of a planetary civilization presents a philosophical contribution to integral ecology an emerging approach to the field that crosses disciplinary boundaries of the humanities and sciences in this original book sam mickey argues for the transdisciplinary significance of philosophical concepts that facilitate understandings of and responses to the boundaries involved in ecological issues mickey demonstrates how much the provocative french philosopher gilles deleuze contributes to the development of such concepts situating his work in dialogue with that of his colleagues felix guattari and jacques derrida and with theorists who are adapting his concepts in contemporary contexts such as isabelle stengers catherine keller and the speculative realist movement of object oriented ontology the book focuses on the overlapping existential social and environmental aspects of the ecological problems pervading our increasingly interconnected planet it explores the boundaries between self and other humans and nonhumans sciences and humanities monism and pluralism sacred and secular fact and fiction the beginning and end of the world and much more

given the fundamental importance of and universal interest in whether extraterrestrial life has developed or could eventually develop in our solar system and beyond it is vital that an examination of planetary habitability go beyond simple assumptions such as where there is water there is life this book has resulted from a workshop at the international space science institute issi in bern switzerland which brought together planetary geologists geophysicists atmospheric scientists and biologists to discuss the multi faceted problem of how the habitability of a planet

co evolves with the geology of the surface and interior the atmosphere and the magnetosphere each of the six chapters have been written by authors with a range of expertise so that each chapter is itself multi disciplinary comprehensive and accessible to scientists in all disciplines these chapters delve into what life needs to exist and ultimately to thrive the early environments of the young terrestrial planets the role of volatiles in habitability currently habitable but possibly not inhabited geologic environments the connection between a planet s inner workings and the habitability of its surface and the effects on planetary atmospheres of solar evolution and the presence or absence of a magnetosphere this book serves as an ideal reference for those planning missions that will hunt for biomarkers especially on mars for biologists and geoscientists seeking the other side of the story and for researchers and upper level students interested in an in depth review of the geologic evolution of terrestrial planets from their cores to their magnetospheres and how that evolution shapes the habitability of the planetary surface
