this book investigates a wide range of phase equilibrium modelling and calculation problems for compositional thermal simulation further it provides an effective solution for multiphase isenthalpic flash under the classical framework and it also presents a new flash calculation framework for multiphase systems which can handle phase equilibrium and chemical reaction equilibrium simultaneously the framework is particularly suitable for systems with many phases and reactions in this book the author shows how the new framework can be generalised for different flash specifications and different independent variables since the flash calculation is at the heart of various types of compositional simulation the findings presented here will promote the combination of phase equilibrium and chemical equilibrium calculations in future simulators aiming at improving their robustness and efficiency

this book presents selected papers from the 7th international conference on advances in energy research icaer 2019 providing a comprehensive coverage encompassing all fields and aspects of energy in terms of generation storage and distribution themes such as optimization of energy systems energy efficiency economics management and policy and the interlinkages between energy and environment are included the contents of this book will be of use to researchers and policy makers alike

the book contains a relatively complete treatment of finite difference models of black oil type reservoirs

reflecting the many changes in the technology of the oil and gas industry since its last publication in 1984 this new edition of modern petroleum technology is the most authoritative and thoroughly up to date review of technical expertise employed across the whole of the international oil and gas industry written by leading international experts from industry and academia all entries have been updated and many new entries have been added for this 6th edition the work is divided into two volumes upstream and downstream upstream examines the different stages of the exploration and production processes involved in the location and extraction of raw materials including the latest applications employed in modern seismic technology and the production of heavy oils downstream covers the process of refining the raw material and producing and supplying

the end product from refineries to service stations both volumes deal with all aspects of their area of petroleum technology from the innovations in technology to the environmental issues surrounding its practical application modern petroleum technology considers the current challenges and opportunities presented by new technology enabling everyone in the industry from the busy chief executive to the petroleum engineer to stay in touch with developments outside their own area of expertise modern petroleum technology s concise and comprehensive overview will also be of special value to analysts strategists lecturers and students oil and gas consultants and legal and financial service providers
