Understanding why so many people across the world are so poor is one of the central intellectual challenges of our time. This book provides the tools and data that will enable students, researchers, and professionals to address that issue. Empirical Development Economics has been designed as a hands-on teaching tool to investigate the causes of poverty. The book begins by introducing the quantitative approach to development economics. Each section uses data to illustrate key policy issues. Part one focuses on the basics of understanding the role of education, technology, and institutions in determining why incomes differ so much across individuals and countries. In part two, the focus is on techniques to address a number of topics in development, including how firms invest, how households decide how much to spend on their children's education, whether microcredit helps the poor, whether food aid works, who gets private schooling, and whether property rights enhance investment. A distinctive feature of the book is its presentation of a range of approaches to studying development questions. Development economics has undergone a major change in focus over the last decade with the rise of experimental methods to address development issues. This book shows how these methods relate to more traditional ones. Please visit the book's website at [empiricalde.com](http://empiricalde.com) for online supplements including Stata files and solutions to the exercises.

Predictive drug testing on human tumor cells in order to define the appropriate chemotherapy will remain imperative as long as the anticancer agents available are few in number and show only limited activity. The advantages of an effective test would lie in obviating the need for testing antineoplastic agents on large cohorts of patients for assessment of drug activity, phase II studies, and in allowing determination of optimal use of anticancer agents. Phase III trials such as an in vitro test could help to better define dose and schedule of drugs. Preclinically, the additive value of individual drugs could be determined on tumor cells in vitro in order to define the best combination. Chemotherapy in vivo test directed therapy would avoid unnecessary drug-related morbidity in patients with refractory tumors. Chemotherapy treatment would be more than justified even with side effects if palliation or even prolonged survival could be anticipated. As a result, the benefits of predictive drug testing on human tumor cells would extend beyond improvement of individual patient treatment. If the testing helped to identify new active agents, this spectrum of benefits to the entire field of oncology provides tremendous motivation for the development of such testing. Although a number of chemosensitivity tests have been proposed since the advent of modern anticancer chemotherapy, interest has been

renewed by the possibility of cloning human tumor cells on agar plates with a view to testing drug activity on cells with high proliferation capacity

the migration of labor from rural to urban areas is an important part of the urbanization process in developing countries even though it has been the focus of abundant research over the past five decades some key policy questions have not found clear answers yet to what extent is internal migration a desirable phenomenon and under what circumstances should governments intervene and if so with what types of interventions what should be their policy objectives to shed light on these important issues the authors survey the existing theoretical models and their conflicting policy implications and discuss the policies that may be justified based on recent relevant empirical studies a key limitation is that much of the empirical literature does not provide structural tests of the theoretical models but only provides partial findings that can support or invalidate intuitions and in that sense support or invalidate the policy implications of the models the authors broad assessment of the literature is that migration can be beneficial or at least be turned into a beneficial

phenomenon so that in general migration restrictions are not desirable they also identify some data issues and research topics which merit further investigation world bank web site
