regulation of business activity is nearly as old as law itself in the last century though the use of regulation by modern governments has grown markedly in both volume and significance to the point where nearly every facet of today s economy is subject to some form of regulation when successful regulation can deliver important benefits to society however regulation can also impose undue costs on the

economy and when designed or implemented poorly fail to meet public needs at all given the importance of sound regulation to society its study by scholars of law and social science is also of paramount importance in this chapter we review the state of the field by focusing on four major areas of empirical research 1 regulatory policy making 2 regulatory enforcement 3 business responses to regulation and 4 innovative models of regulation we begin by reviewing the political economy literature on the factors that influence government regulators as well as the ways that overseers may use administrative procedures to affect decisions of regulatory agencies we next highlight the varied empirical findings on adversarial versus cooperative enforcement styles we then review explanations for business responses to regulatory pressures including the range of factors influencing compliance and beyond compliance behavior finally we survey the ever growing research literature on innovative approaches to regulation including self regulation performance standards and market based incentives this chapter serves both as a stand alone account of the existing state of empirical regulatory research by political scientists and researchers from other disciplines as well as an introduction to the authors edited volume that reprints a diverse collection of classic studies of regulation and regulatory processes

deciding whether to regulate involves more than making a choice between complete freedom and total control individuals and businesses can be regulated but still retain considerable discretion even to the point of selecting on their own the rules that apply to themselves in this paper we focus on this latter kind of regulation specifically assessing self regulation as well as what some have called meta regulation we begin by conceptually situating these options within a larger regulatory taxonomy characterizing self regulation by the unity between the regulator and the regulated entity and defining meta regulation as those ways that outside regulators seek to induce regulated entities to develop their own self regulatory responses both of these regulatory approaches afford significant discretion to the targets of regulation and as such they may not always seem appropriate especially if businesses cannot be expected to use their discretion in ways that maximize the public's overall welfare to consider the effectiveness of these regulatory alternatives we present two cases of self regulation responsible care and the institute of nuclear power operations and two cases of meta regulation toxic use reduction act and 33 50 the available evidence on these and other cases indicates that self regulation and meta regulation can sometimes achieve regulatory goals but that their effectiveness can depend upon other non regulatory incentives and external pressures that bear down upon businesses we conclude by suggesting that meta regulation and self regulation may be most appropriate when the government lacks ready access to information about regulatory problems and their possible solutions precisely the kinds of complex circumstances where more conventional forms of regulation face their greatest challenges
