eloquent practical and wise this book by one of the world s most important scientists and two time pulitzer prize winner should be read and studied by anyone concerned with the fate of the natural world it makes one thing clear we know what we do and we have a choice the new york times book review e o wilson assesses the precarious state of our environment examining the mass extinctions occurring in our time and the natural treasures we are about to lose forever yet rather than eschewing doomsday prophecies he spells out a specific plan to save our world while there is still time his vision is a hopeful one as economically sound as it is environmentally necessary

the future of life meta evolution represents the first comprehensive formulation of the hypothesis that evolution is the unifying force underlying the dynamics of all processes in the universe both organic and inorganic these include all facets of human existence and civilisation the sciences technology arts humanities and religion in essence by applying quantum information network and decision theory it is demonstrated that an overarching evolutionary process shapes the spectrum of life and phenomena in the universe as a generic paradigm beyond darwin s original biology based theory the theory of evolution is undoubtedly the most powerful paradigm ever conceived by humans to explain their own existence since darwin s epoch making treatise origin of species published in 1859 evolution has been centre stage universally recognised as the driving force in the emergence of modern humans from the genesis of life on this planet almost 4 billion years ago however despite its ubiquitous brilliance as the jewel in the crown of human intellectual achievement the notion of evolution has never been developed to its full potential it remains instead constrained within its biological cradle often reduced in everyday connotation to its lowest common denominator of survival of the fittest the intention of this book to re evaluate and expand the darwinian model of evolution to demonstrate that its current application is only the tip of the intellectual iceberg and that by combining its formidable biological principles with those of decision complexity network quantum and information theory it emerges as an incalculably deeper and richer model than previously contemplated it will be demonstrated that the evolutionary engine which drives biological development also drives all other dynamic adaptive processes the physical social cognitive economic political and technological and is in fact the major dynamic governing the universe past present and future it is further proposed to demonstrate that recent developments in artificial intelligence and ubiquitous computing through the internet mark the next crucial stage in life s evolution involving the inevitable symbiosis of vast computational intelligence with the human mind the major hypothesis developed in this book of a global all encompassing theory of evolution coupled with its potential for realising the emancipation of human intelligence and potential provides a vastly more powerful paradigm for exploring the future of life than current scientific scenarios the resulting omega state of infinite knowledge and wisdom which is proposed has been actively championed by a number of eminent 19th and 20th century philosophers such as teillhard de chardin henri bergson schelling alfred whitehead samuel alexander and more recently by the leading physicist and futurist professor frank tipler however to date no equivalent scientific framework for supporting such a hypothesis has been provided in conclusion the future of life meta evolution has been written not as an academic text but as primarily a non technical review of the evidence to support such a hypothesis in much the same vein as other recent publications in the popular science philosophy genre it is hoped that this approach will therefore provide a window into the wider evolutionary debate for the general reader interested in one of the most critical emerging paradigm shifts of the 21st century
