master s thesis from the year 2008 in the subject environmental sciences grade  
passed assumption university of thailand college of internet distance education side  
school of business administration course master thesis project language english  
abstract this thesis presents a research project entitled a hypothetical enhanced  
renewable energy utilization ereu model for electricity generation in thailand this  
research is motivated by thailand s rapidly increasing electricity consumption caused  
by the country s long standing above average economic growth consequently the  
rising electricity demand can only be satisfied by continuously growing electricity  
imports and thus creating a significant burden to thailand s national budget further  
more thailand is heavily dependent on natural gas reserves for electricity generation  
however these are expected to be depleted within only three decades and global  
price levels for conventional fuels are increasingly volatile with an ascending  
tendency as well therefore thailand faces an urgent need to strategically plan for the  
broad utilization of domestic renewable energy resources which is essential for a  
more diversified and thus sustainable electricity generation as well as for the nation s  
endeavor to become an energy hub within the south east asian region under these  
circumstances this research conducts a comprehensive literature review regarding  
the past development as well as the current situation of renewable energy utilization  
in thailand which concludes in the identification of the importance of renewable  
energy in the given context and closes with both a distinctive need assessment and a  
conceptual framework for thailand s future renewable energy strategy subsequently  
the research introduces a unique primary research endeavor in the form of an  
explorative expert interview survey which succeeds in a substantial collection of  
qualitative and in depth data these valuable data is first objectively analyzed and  
second subjectively interpreted and summarized to become the major source for the  
derivation of a multitude of potential strategic recommendations for an enhanced  
future renewable energy utilization development in thailand finally the entirety of  
theses recommended strategic approaches based on both the secondary and  
primary research are assembled to develop the enhanced renewable energy utilization  
ereu model for electricity generation in thailand as the fundamental finding  
of this thesis and research project respectively
