this book presents information about the high enzymatic reactivity of reactive oxygen species chapters in the book cover several aspects of the topic such as the sources formation mechanisms reaction centers oxidation reduction reactions cellular respiration chemistry enzymatic kinetics mitochondrial and plastid electron transport chains oxidation reduction potential reaction constants reaction velocity and reaction mechanisms involved cellular cytotoxicity antioxidant defense mechanisms in plants and animals response of plants to conditions of environmental stress xenobiotics and the thermodynamics inherent to oxygen metabolism the book also features a chapter on flavonoids which highlights a paradoxical facet of the affinity of reactive oxygen species for enzymes flavonoids are mainly antioxidant molecules as they act as trappers of reactive oxygen species the chapter informs readers about the metabolic pathways mediated by enzymes through which flavonoids become promoters of these same reactive oxygen species all chapters present the subject in a simple analytical format while highlighting the scientific evidence gathered by researchers so far the volume is an interesting

reference for scholars learning about the biochemistry and enzymology of oxygen and its free radical derivatives

las mal llamadas clases de problemas constituyen una herramienta fundamental en cualquier disciplina científica tradicionalmente estas clases cumplen el objetivo de complementar aspectos más o menos difíciles de la disciplina en cuestión sin embargo deberían entenderse más como un entrenamiento que capacite al estudiante para resolver cualquier problema en sentido amplio que se le pueda plantear en su vida profesional con este espíritu se concibe esta colección de problemas resueltos que ediciones paraninfo pone a disposición de profesores y estudiantes de una gran variedad de disciplinas académicas esta obra está concebida para ser un instrumento de apoyo para asignaturas relacionadas con la electrónica analógica los problemas han sido elegidos por el autor como resultado de años de experiencia como docente en este campo se trata 48 problemas resueltos repartidos en tres grandes bloques temáticos circuitos con diodos circuitos con transistores y circuitos con amplificadores operacionales la secuenciación está en consonancia con el orden cronológico de impartición seguido en la mayoría de los planes de estudio de las ingenierías tanto en asignaturas de formación obligatoria como en las de formación optativa desde el punto de vista metodológico los problemas han sido debidamente resueltos mediante un desarrollo lógico con razonamientos claros y siempre en aras de lograr una mejor comprensión por parte del estudiante de ingeniería por todo ello el libro será igualmente útil para alumnos de bachillerato y formación profesional guillermo palacios es profesor titular en el departamento de electrónica y comunicaciones de escuela universitaria politécnica de teruel

autonomous sensors transmit data and power their electronics without using cables they can be found in e g wireless sensor networks wsns or remote acquisition systems although primary batteries provide a simple design for powering autonomous sensors they present several limitations such as limited capacity and power density and difficulty in predicting their condition and state of charge an alternative is to extract energy from the ambient energy harvesting however the

reduced dimensions of most autonomous sensors lead to a low level of available power from the energy transducer thus efficient methods and circuits to manage and gather the energy are a must an integral approach for powering autonomous sensors by considering both primary batteries and energy harvesters is presented two rather different forms of energy harvesting are also dealt with optical or solar and radiofrequency rf optical energy provides high energy density especially outdoors whereas rf remote powering is possibly the most feasible option for autonomous sensors embedded into the soil or within structures throughout different chapters devices such as primary and secondary batteries supercapacitors and energy transducers are extensively reviewed then circuits and methods found in the literature used to efficiently extract and gather the energy are presented finally new proposals based on the authors own research are analyzed and tested every chapter is written to be rather independent with each incorporating the relevant literature references powering autonomous sensors is intended for a wide audience working on or interested in the powering of autonomous sensors researchers and engineers can find a broad introduction to basic topics in this interesting and emerging area as well as further insights on the topics of solar and rf harvesting and of circuits and methods to maximize the power extracted from energy transducers
