the illusion of reality was conceived during my tenure as director of the newly established division of information science and technology at the national science foundation in 1979 1981 as a partial response to the need for a textbook for students both in and out of government that would provide a comprehensive view of information science as a fundamental constituent of other more established disciplines with a unity and coherence distinct from computer science cognitive science and library science although it is related to all of them driven by the advances of information technology the perception of information science has progressed rapidly today it seems well understood that information processing biological organisms and information processing electronic machines have something basic in common that may subsume the theory of computation as well as fundamental parts of physics this book is primarily intended as a text for an advanced undergraduate or a graduate introduction to information science the multidisciplinary nature of the subject has naturally led to the inclusion of a considerable amount of background material in various fields the reader is likely to find the treatment relatively oversimplified in fields with which he is familiar and perhaps somewhat heavier sailing in less familiar waters the theme of common principles among seemingly unrelated applications provides the connective tissue for the diverse topics covered in the text and i hope justifies the variable level of presentation some of the material appears here for the

jean baudrillard is one of the outstanding representatives both of french poststructuralism and postmodernism because of radical criticism it was not possible for him to establish a logically coherent theoretical system the philosophical aspects of his work are specifically merged therefore into a critical asystematic fragmentarism which is the subject of this work from the critique of the political economy of the sign through critiques of rationalism reality progress truth history to the theory of simulation baudrillard's specific para concepts fatal strategy symbolic exchange seduction hyperreality pataphysics etc are constantly fragmentarily present in the development of his thought these concepts are baudrillard's attempt at disengagement from modern philosophy and his new unsystematic postmodern view of reality in general in the analysis of binary metaphysical oppositions reality simulation subject object knowledge seduction history end radical irrational nihilism metaphysics god pataphysics baudrillard is radically exclusive through the arbitrary preference of one over the other concept his ideas it is possible to conclude that these dualistic antagonisms are also paradoxically compatible in his system this compatibility is very close to the irrational mysticism of this thinker this book is a clear and lucid presentation of this unique brand of postmodernism to english speaking scholarship
