complex analysis and applications second edition explains complex analysis for students of applied mathematics and engineering restructured and completely revised this textbook first develops the theory of complex analysis and then examines its geometrical interpretation and application to dirichlet and neumann boundary value problems a discussion of complex analysis now forms the first three chapters of the book with a description of conformal mapping and its application to boundary value problems for the two dimensional laplace equation forming the final two chapters this new structure enables students to study theory and applications separately as needed in order to maintain brevity and clarity the text limits the application of complex analysis to two dimensional boundary value problems related to temperature distribution fluid flow and electrostatics in each case in order to show the relevance of complex analysis each application is preceded by mathematical background that demonstrates how a real valued potential function and its related complex potential can be derived from the mathematics that describes the physical situation

the handbook of thin film deposition techniques principles methods equipment and applications second edition explores the technology behind the spectacular growth in the silicon semiconductor industry and the continued trend in miniaturization over the last 20 years this growth has been fueled in large part by improved thin film deposition tec

biomass can be converted to energy biofuels and bioproducts via thermochemical conversion processes such as combustion pyrolysis and gasification combustion technology is most widely applied on an industrial scale however biomass gasification and pyrolysis processes are still in the research and development stage the major products from these processes are syngas bio oil and char called also biochar for agronomic application among these products biomass chars have received increasing attention for different applications such as gasification co combustion catalysts or adsorbents precursors soil amendment carbon fuel cells and supercapacitors this special issue provides an overview of biomass char production methods pyrolysis hydrothermal carbonization etc characterization techniques e g scanning electronic microscopy x ray fluorescence nitrogen adsorption raman spectroscopy nuclear
