history is both an academic discipline and a school subject as a discipline it fosters a
 systematic way of discovering and evaluating the events of the past as a school subject

american history is a staple of middle grades and high school curricula in the united states in higher education it is part of the liberal arts education tradition its role in school learning provides a context for our approach to history as a topic of learning in reading history students engage in cognitive processes of learning text processing and reasoning this volume touches on each of these cognitive problems centered on an in depth study of college students text learning and extended to broader issues of text understanding the cognitive structures that enable learning of history and reasoning about historical problems slated to occupy a distinctive place in the literature on human cognition this volume combines at least three key features in a unique examination of the course of learning and reasoning in one academic domain history the authors draw theory and analysis of text understanding from cognitive science and focus on multiple natural texts of extended length rather than laboratory texts as well as multiple and extended realistic learning situations the research demonstrates that history stories can be described by causal temporal event models and that these models capture the learning achieved by students this text establishes that history learning includes learning a story but does not assume that story learning is all there is in history it shows a growth in students reasoning about the story and a linkage developed over time and with study between learning and reasoning it then illustrates that students can be exceedingly malleable in their opinions about controversial questions and generally quite influenced by the texts they read and it presents patterns of learning and reasoning within and between individuals as well as within the group of students as a whole by examining students ability to use historical documents this volume goes beyond story learning into the problem of document based reasoning the authors show not just that history is a story from the learner s point of view but also that students can develop a certain expertise in the use of documents in reasoning

the symposium on which this volume was based brought together approximately fifty scientists from a variety of backgrounds to discuss the rapidly emerging set of competing technologies for exploiting a massive quantity of textual information this group was challenged to explore new ways to take advantage of the power of on line text a billion words of text can be more generally useful than a few hundred logical rules if advanced computation can extract useful information from streams of text and help find what is needed in the sea of available material while the extraction task is a hot topic for the field of natural language processing and the retrieval task is a solid aspect in the field of information retrieval these two disciplines came together at the symposium and have been cross breeding more than ever the book is organized in three parts the first group of papers describes the current set of natural language processing techniques used for interpreting and extracting information from quantities of text the second group gives some of the historical perspective methodology and current practice of information retrieval work the third covers both current and emerging applications of these techniques this collection of readings should give students and scientists alike a good idea of the current techniques as well as a general concept of how to go about developing and testing systems to handle volumes of text

this book accomplishes two things simultaneously it teaches you to use the latest version of the powerful matlab programming environment and it teaches you core transferable programming skills that will make you feel at home with most procedural programming languages matlab has been in existence for more than 30 years and is used by millions of engineers scientists and students worldwide both for its depth and its easy usability with dozens of specialized toolboxes available beyond the core program as well as its companion program simulink for simulation and model based design matlab can serve as an invaluable aid throughout your career unlike many matlab books ours assumes no prior experience in computer programming using an approachable tone we take you from the simplest variables through complex examples of data visualization and curve fitting each chapter builds on the last presenting an in depth tutorial on a focused concept central to programming using the matlab language but applicable to countless other popular and in demand languages such as c java javascript r and python we ll ask you to perform short exercises as we work through each chapter followed by more end to end exercises and mental challenges at the chapter s end as the complexity of the concepts increases the exercises present increasingly real world engineering challenges to match once you ve completed an engineer s introduction to programming with matlab 2019 you will have a solid foundation in computer programming forms and concepts and a comfort with the matlab environment and programming language we believe that you ll enjoy both gaining and having that knowledge and that you ll be able to use it almost immediately with your other coursework videos the authors of this book have recorded instructional videos to accompany this book these videos allow you to see many of the instructions given in the tutorials being executed in matlab itself these videos should be of particular help to visual learners this book includes step by step tutorials written to help the novice user become proficient using matlab a getting started chapter for configuring matlab for use with the tutorials organization and a level suitable for a first year introductory engineering course updates for the matlab 2019a release tips offering suggestions and warnings as you progress through the book key terms and key commands listed to recap important topics and commands learned in each tutorial an index to help you easily look up topics exercises at the end of each tutorial providing challenges to a range of abilities
