this textbook offers an elementary introduction to noncommutative rings and algebras beginning with the classical theory of finite  
 dimensional algebras it then develops a more general structure theory of rings grounded in modules and tensor products the final  
 chapters cover free algebras polynomial identities and rings of quotients many results are presented in a simplified form rather than  
 in full generality with an emphasis on clear and understandable exposition prerequisites are kept to a minimum and new concepts are  
 introduced gradually and carefully motivated introduction to noncommutative algebra is thus accessible to a broad mathematical
