this book presents the description of the state of modern iterative techniques together with systematic analysis the first chapters discuss the classical methods comprehensive chapters are devoted to semi iterative techniques chebyshev methods transformations incomplete decompositions gradient and conjugate gradient methods multi grid methods and domain decomposition techniques including e.g. the additive and multiplicative schwarz method in contrast to other books all techniques are described algebraically for instance for the domain decomposition method this is a new but helpful approach every technique described is illustrated by a pascal program applicable to a class of model problem

elementary statistics a brief version is a shorter version of the popular text elementary statistics a step by step approach this softcover edition includes all the features of the longer book but it is designed for a course in which the time available limits the number of topics covered it is for general beginning statistics courses with a basic algebra prerequisite the book is non theoretical explaining concepts intuitively and teaching problem solving through worked examples and step by step instructions this edition places more emphasis on conceptual understanding and understanding results this edition also features increased emphasis on excel minitab and the ti 83 plus and ti 84 plus graphing calculators computing technologies commonly used in such courses

elementary statistics is geared toward students who do not have a strong mathematics background and have completed at least high school algebra this book uses a nontheoretical approach in which concepts are explained intuitively and are supported by examples there are no formal proofs in this book the statistical applications are drawn from various disciplines including natural sciences social sciences business economics and computer science

the idea for this book was developed in the seminar on problems of continuum mechanics which has been active for more than twelve years at the faculty of mathematics and physics charles university prague this seminar has been pursuing recent directions in the development of mathematical applications in physics especially in continuum mechanics and in technology it has regularly been attended by upper division and graduate students faculty and scientists and researchers from various institutions from prague and elsewhere these seminar participants decided to publish in a self contained monograph the results of their individual and collective efforts in developing applications for the theory of variational inequalities which is currently a rapidly growing branch of modern analysis the theory of variational inequalities is a relatively young mathematical discipline apparently one of the main bases for its development was the paper by g fichera 1964 on the solution of the signorini problem in the theory of elasticity later j l lions and g stampacchia 1967 laid the foundations of the theory itself time dependent inequalities have primarily been treated in works of j l lions and h bnlzis the diverse applications of the variational inequalities theory are the topics of the well known monograph by g du vault and j l lions les iniquations en micanique et en physique 1972

includes solutions to odd and selected even exercises in the book solutions are worked out step by step where appropriate and generally follow the same procedures used in the examples in the textbook the book itself is a condensed version of the widely used elementary statistics a step by step approach 4th edition this book offers instructors an effective solution to teaching the fundamentals of statistics within a more limited time frame a data disk is provided with the text to save students time and prevent data entry errors the book also contains numerous technology step by step sections providing examples of excel minitab and ti 83 calculator technologies
