cancers due to exposures in the workplace in developing countries have received little attention because of the overriding problems in those regions of communicable diseases poverty malnutrition vulnerability to natural disasters and war this book shows however that the global process of industrialization is resulting in increased exposures to occupational carcinogens in developing countries owing to unsafe technology bad working conditions ineffective legislation on occupational safety and health and inadequate supervision these factors are exacerbated by the fact that a workforce with generally poor health and nutritional status and which includes many women and children is more vulnerable to many diseases including cancer the transfer of hazardous industries and wastes from developed to developing countries is of particular concern this publication brings together all of the available published data on occupational cancer in developing countries and presents the results of a survey carried out at iarc on common occupational exposures and measures that have been taken to control them the overview indicates where information is lacking about the health effects of agents used in developing countries many of which are banned or restricted elsewhere

evaluates the carcinogenic risk to humans posed by infection with three schistosoma trematodes three liver flukes and the bacterium helicobacter pylori these biological agents were selected for evaluation on the basis of evidence suggesting a causal association between infection and the development of human cancers the first monograph assesses data on schistosoma haematobium s mansoni and s japonicum the three species which account for the vast majority of schistosomal disease in humans the most extensive sections evaluate the results of studies of cancer in humans and experimental animals concentrating on the strength of evidence linking infection with s haematobium to squamous cell carcinoma of the urinary bladder and infection with s mansoni or s japonicum to an increased risk for cancers of the gastrointestinal tract the monograph concludes that infection with s haematobium is carcinogenic to humans and that infection with s japonicum is possibly carcinogenic to humans infection with s mansoni could not be classified the second monograph on liver flukes evaluates data on opisthorchis viverrinio felineus and clonorchis sinensis these foodborne trematodes establish a chronic infection

of the bile ducts and more rarely the pancreatic duct and gall bladder of humans and other mammals most carcinogenicity data centre on the possibility that these trematodes are involved in the development of cholangiocarcinoma or liver cancer the monograph concludes that infection with *O. viverrini* is carcinogenic to humans and that infection with *O. sinensis* is probably carcinogenic to humans infection with *O. felineus* could not be classified the final monograph evaluates data on *Helicobacter pylori* more than half of the world's population may be infected with this bacterium which is responsible for most cases of chronic gastritis and duodenal ulcer citing several studies linking infection to gastric cancer in humans the monograph concludes that infection with *H. pylori* is carcinogenic to humans

this directory is an annual compendium of current research in epidemiology the 1994 edition 17th in the series contains abstracts of the 1246 projects being carried out in over 80 countries and reflects the huge range of epidemiological research into the distribution causes and prevention of cancer around the world each project is indexed in up to eight separate indexes enabling rapid searches for current studies fitting almost any description the eight indexes are name of investigator's keywords cancer site's study type cohort case control etc country chemical exposure occupational exposure and cancer registry the directory also includes comprehensive lists of 261 population based cancer registries and over 300 biological material banks all available for collaboration in epidemiological research the addresses telephone and telex numbers of nearly 1000 principal investigators is provided to improve contact between research workers

this book is a compilation and discussion of data on the survival of cancer patients in 12 european countries measures of incidence survival and mortality are critical to the interpretation of data on progress in the fight against cancer and in the evaluation of the overall effectiveness of cancer control programmes randomized controlled clinical trials have shown many modern protocols for cancer treatment to be more effective than earlier treatments but until now comparable population based survival figures have rarely been available eurocare is a concerted action among european cancer registries aimed at estimating and comparing the survival of cancer patients in different european populations the rationale behind this project is to optimize the comparability of survival data by using an agreed and standard definition of the diseases for which survival is to be compared and by taking due account of basic demographic variables the eurocare working group succeeded in collecting

checking and editing data on cancer survival from 30 cancer registries in 12 countries and established a database covering some 800 000 cancer patients in the period 1978-85 and followed up to the end of 1990 this database forms the raw material for this monograph

this publication represents the views expert opinions of an iarc working group on the evaluation of carcinogenic risks to humans which met in Lyon 6-13 June 1995
