the handling of numbers in arithmetic and the progression into the more abstract field of mathematics and statistics is generally approached poorly in our education system the inadequacy is not necessarily in the teaching techniques or the books and other text used but rather in the attitude towards these subjects these subjects are seen as something which has to be taught because it is part of a preordained curriculum rather than a set of tools which are available to help people live a fuller more productive and more interesting life it is so enlightening when one hears people say i thought that when i left school i was leaving all the maths

stuff behind me or i was bored witless by all those numbers and formulas sic that were forced down my throat this book was written out of a frustration at seeing statistics taught through formal methods using large scale statistic software packages it seemed to me that very little was learned by this process and quite often both the teachers and the students were in denial it is true that the students were generally able to pick up enough knowledge to pass an examination or to complete a piece of research but i seldom saw anything which could be regarded as deep learning and the little which had been learned did not stay for any length of time in the heads of these learners i know people who have passed several university level courses in statistics and they can hardly recall never mind use any of what was taught to them

the personal computer has made statistical analysis easier and cheaper previously statistical analysis was difficult for many reasons two of the reasons were 1 statistical analysis was slow and tedious because calculations were done by hand 2 it was costly because it was done on mainframes and mainframe time was expensive this book discusses statistical analysis using two personal computer software packages minitab 12 and microsoft excel 97 minitab was chosen because it is powerful and is one of the more user friendly statistical software packages microsoft excel 97 was selected because it is one of the most important software packages to learn and most companies use microsoft excel excel is a software package that is not dedicated to statistical analysis like minitab but it has many statistical features and a very powerful development environment for writing customized statistical analysis the book is organized in a textbook format each chapter discusses statistical concepts and illustrates the use of minitab and or excel often it becomes necessary to write macros programs in order to do specific statistical analysis this books prints the codes of the macros for the reader to use and study this is valuable because usually the difficult part is how to write the code what the reader will find after studying this book is that statistical analysis will become more fun because he will have more time doing statistical analysis and make less statistical calculations

utilizing the latest software this book presents the essential statistical procedures for drawing valuable results from data in the social sciences mobilizing interesting real world examples from the field of education understanding educational statistics using

microsoft excel and spss supplies a seamless presentation that identifies valuable connections between statistical applications and research design class tested to ensure an accessible presentation the book combines clear step by step explanations and the use of software packages that are accessible to both the novice and professional alike to present the fundamental statistical practices for organizing understanding and drawing conclusions from educational research data the book begins with an introduction to descriptive and inferential statistics and then proceeds to acquaint readers with the various functions for working with quantitative data in the microsoft excel environment such as spreadsheet navigation sorting and filtering and creating pivot tables subsequent chapters treat the procedures that are commonly employed when working with data across various fields of social science research including single sample tests repeated measure tests independent t tests one way anova and factorial anova correlation bivariate regression chi square multiple regression individual chapters are devoted to specific procedures each ending with a lab exercise that highlights the importance of that procedure by posing a research question examining the question through its application in excel and spss and concluding with a brief research report that outlines key findings drawn from the results real world examples and data from modern educational research are used throughout the book and a related site features additional data sets examples and labs allowing readers to reinforce their comprehension of the material bridging traditional statistical topics with the latest software and applications in the field of education understanding educational statistics using microsoft excel and spss is an excellent book for courses on educational research methods and introductory statistics in the social sciences at the upper undergraduate and graduate levels it also serves as a valuable resource for researchers and practitioners in the fields of education psychology and the social sciences who require a statistical background to work with data in their everyday work
