the world in which classical positivistic science and technology obtained great success has vanished however the way of thinking promoted by that epoch still lingers in our social consciousness sometimes

as a burden to conquer the short comings of classical analytical science in the modern ever more complex world systems theory and its applications within systems science present an alternative to old paradigms systems theorists see common principles in the structure and operation of systems of all kinds and sizes they promote an interdisciplinary science adapted for a universal application with a common language and area of concepts this approach is seen as a means of not only overcoming the fragmentation of knowledge and the isolation of the specialist but also finding new solutions to problems created by the earlier solution of problems this book introduces the systemic alternative it is divided into two parts the first is devoted to the historical background of the systems movement and presents pioneering thoughts and theories of the area basic concepts of general systems theory with well known laws and principles are discussed as well as related topics like cybernetics and information theory the second part deals with some of the common applications of systems theory within systems science such as artificial intelligence management information systems and informatics an attempt is made to predict the future of systems theory in a world apparently becoming fragmented and integrated at the same time to engage oneself in systems theory and its striving towards an applied universal science is a highly cross scientific occupation the reader will come into contact with many different academic disciplines and consequently the possibility of an all round education something particularly needed in our over specialized world

the term systems theory is used to characterize a set of disparate yet related approaches to fields as

varied as information theory cybernetics biology sociology history literature and philosophy what unites each of these traditions of systems theory is a shared focus on general features of systems and their fundamental importance for diverse areas of life yet there are considerable differences among these traditions and each tradition has developed its own methodologies journals and forms of analysis this book explores this terrain and provides an overview of and guide to the traditions of systems theory in their considerable variety the book draws attention to the traditions of systems theory in their historical development especially as related to the humanities and social sciences and shows how from these traditions various contemporary developments have ensued it provides a guide for strains of thought that are key to understanding 20th century intellectual life in many areas

the systems movement now 40 years old is made up of many associations of systems thinkers from different disciplines all over the world the united kingdom systems society ukss was formed in 1978 today it has over 300 members and is committed to the development and promotion of systems philosophy theory concepts and methodologies for improving decision making for the benefit of organizations and wider society the first ukss international conference was held at the university of hull in july of huddersfield 1989 since then we have held international conferences at the universities 1991 and paisley 1993 the ukss international conferences are now an established biannual event and this our fourth international conference will be jointly hosted by the universities of hull and humberside systems science is considered to be a trans discipline which promotes critical and effective intervention in complex organisational and social problem situations as such it traverses hard through soft to critical systems thinking and methodologies yet despite the currently robust state of the ukss the systems movement cannot be described as an international movement different subdisciplines are at different stages of

development and are often engaged in pursuing their own particular interests and themes with little conversation between the subdisciplines despite their common interest in systems
