text focuses on the methods of depicting knowledge based concepts in order to assert power

beyond a visual explanation of scientific and computational notions this book combines formal descriptions with graphical presentations and encourages readers to interact by creating visual solutions for science related concepts and presenting data this reference is essential for researchers computer scientists and academics focusing on the integration of science technology computing art and mathematics for visual problem solving

nonlinear equations arise in essentially every branch of modern science engineering and mathematics however in only a very few special cases is it possible to obtain useful solutions to nonlinear equations via analytical calculations as a result many scientists resort to computational methods this book contains the proceedings of the joint ams siam summer seminar computational solution of nonlinear systems of equations held in july 1988 at colorado state university the aim of the book is to give a wide ranging survey of essentially all of the methods which comprise currently active areas of research in the computational solution of systems of nonlinear equations a number of entry level survey papers were solicited and a series of test problems has been collected in an appendix most of the articles are accessible to students who have had a course in numerical analysis
