before the late 1980s when the ideas of sustainability and sustainable development to the forefront of public debate conventional neo classical economic thinking about development and growth had rarely given any consideration to the needs of future generations or the sustainability of natural resource use defining sustainability broadly as intergenerational fairness in the long term decision making of a whole society and using established economic concepts this selection of refereed journal articles brings a famously ill defined concept into sharp focus providing academics at all levels with a formidable research tool spanning thirty years of the most important

philosophical theoretical and empirical contributions from both critics and defenders of neo classical assumptions and methods of economic analysis this focused collection of papers constitutes a unique balanced resource on the full range of intellectual debates surrounding the economics of sustainability

sustainable economic development resources environment and institutions presents 25 articles that lay the foundations of sustainable development in a way that facilitates effective policy design the editors mix broad thematic papers with focused micro papers balancing theories with policy designs the book begins with two sections on sustainable development principles and practice and on specific settings where sustainable development is practiced two more sections illuminate institutions governance and political economy additional sections cover sustainable development and agriculture and risk and economic security including disaster management this rich source of information should appeal to any institution involved in development work and to development practitioners grappling with an array of difficult on the ground developmental challenges analyzes policies that move markets and resource use patterns towards achieving sustainability articles are kaleidoscopic in scope and creativity authors embody extraordinary diversity and qualifications

the unprecedented advances in economic development witnessed over the past decades cannot continue if economic progress comes at the expense of the natural environment the sustainable development goals agreed globally in 2015 define a vision of human development where economic social and environmental domains interact to shape the prospects for future prosperity this timely collection highlights the contribution of economics to the study of sustainable development it brings together in one volume some of the most influential articles on the topic by economists over the past fifty years environmental sustainability an inherently interdisciplinary topic is analysed from the perspectives of applied microeconomics environmental and resource economics ecological economics development economics and public economics together with an original introduction by the editors this volume is indispensable for anyone interested or working in the field

the book is a concise introduction to an emerging field within economics drawing on numerous disciplines including environmental science environmental and ecological economics and optimal growth theory sustainability remains a hazy and complex subject the author set out with two objectives one to bring some order into the proliferating measures models and management of sustainability and two to facilitate access to a complex inter disciplinary subject area the book points to practical ways of assessing and enhancing the long term environmental and economic sustainability of our economies the result is a fully international study that should bridge the gap between disciplines and prove to be an essential guide to anyone interested in one of the most important concepts in the social

sciences

cent's and sustainability is a clear sighted response to the 1987 call by dr gro brundtland in our common future to achieve a new era of economic growth that is forceful and at the same time socially and environmentally sustainable the brundtland report argued that not only was it achievable but that it was an urgent imperative in order to achieve a transition to sustainable development while significantly reducing poverty and driving clean and green investment with some still arguing for significantly slowing economic growth in order to reduce pressures on the environment this new book cent's and sustainability shows that it is possible to reconcile the need for economic growth and environmental sustainability through a strategy to decouple economic growth from environmental pressures combined with a renewed commitment to achieve significant environmental restoration and poverty reduction beginning with a brief overview of some of the most pressing environmental challenges of our time the book then explains decoupling theory overviews a number of factors that can undermine and even block efforts to decouple in both developed and developing countries and then discusses a number of key considerations to assist the development of national decoupling strategies the book then focuses on presenting evidence to support greater action not just on climate change but also on decoupling economic growth from the loss of biodiversity and the deterioration of natural systems freshwater extraction waste production and air pollution in the lead up to the 2012 united nations earth summit and beyond cent's and sustainability will be a crucial guide to inform and assist nations to develop strategies to significantly reduce environmental pressures strengthen their economy create jobs and reduce poverty i commend the team from the natural edge project and their partners for undertaking to develop a response to our common future to mark its 20th anniversary dr gro brundtland sequel to the natural advantage of nations published with the natural edge project
