joachim of fiore c 1135 1202 remains one of the most fascinating and enigmatic figures
of medieval christianity in his own time he was an influential advisor to the mighty and
powerful widely respected for his prophetic exegesis and decoding of the apocalypse in
modern times many thinkers from thomas montzer to friedrich engels have hailed him as

a prophet of progress and revolution even present day theologians philosophers and novelists were inspired by joachim s vision of a third age of the holy spirit however at no time was joachim an uncontroversial figure soon after his death the church authorities became suspicious about the explosive potential of his theology while more recently historians held him accountable for the fateful progressivism of western civilization contributors are frances andrews valeria de fraja alfredo gatto peter gemeinhardt sven grosse massimo iiritano bernard mcginn matthias riedl and brett edward whalen

although it took some time to establish the word photonics is both widely accepted and used throughout the world and a major area of activity concerns nonlinear materials in these the nonlinearity mainly arises from second order or third order nonlinear optical processes a restriction is that second order processes only occur in media that do not possess a centre of symmetry optical fibres on the other hand being made of silica glass created by fusing sio molecules are made of material with a centre of z symmetry so the bulk of all processes are governed by third order nonlinearity indeed optical fibre nonlinearities have been extensively studied for the last thirty years and can be truly hailed as a success story of nonlinear optics in fact the fabrication of such fibres and the exploitation of their nonlinearity is in an advanced stage not least being their capacity to sustain envelope solitons what then of second order nonlinearity this is also well known for its connection to second harmonic generation it is an immediate concern however to understand how waves can mix and conserve both energy and momentum of the photons involved the problem is that the wave vectors cannot be made to match without a great deal of effort or at least some clever arrangement has to be made a special geometry or crystal arrangement the whole business is called phase matching and an inspection of the state of the art today reveals the subject to be in an advanced state
