this book addresses the issues of information digital and intellectual technologies in economics and management the international scientific and practical conference digital and information technologies in economics and management ditem2021 was held on

November 2 2021 on the Microsoft Teams platform due to COVID-19 a distinctive feature of the book is that it presented reports of authors from Italy, South Korea, Poland, Armenia, Republic of Belarus and the Russian Federation. Researchers from different countries presented the process of transition of economic activities to the information and digital path of development and presented the main directions and developments that can improve the efficiency and development of the economy and management. The book may be useful to state and regional authorities, international and supranational organizations, the scientific and professional community.

The book features contributions that address both environmental economics and environmental management. It presents a novel dynamic modeling framework for environmental economics in which environmental absorption efficiency is considered as a time-dependent variable with its own dynamics. It also introduces several extensions and applications of the model including the possibility of including self-regenerating environmental absorption efficiency, non-cooperative transboundary issues with two superimposed free-rider behaviors (i.e., emissions reduction and restoration efforts and deforestation) in the environmental management context. It puts forward an entirely new dynamic modeling framework unlike static approaches. The model considers both flow and stock variables reflecting the accumulation of pollution over time. In turn, the book assesses sustainable configurations for supply chain competition providing mathematical insights and managerial recommendations that integrate accumulated pollution aspects and associated negative externalities. Overall, the book calls for combining environmental economics and environmental management in order to arrive at more realistic empirically grounded models given its focus. The book offers a valuable resource for researchers and graduate students with an interest in addressing pollution control challenges in the fields of economics and management science.

With the continuous increase in fossil fuel consumption by industrial sectors, the world is confronted with climate change issues such as environmental pollution and ecological imbalance. Consequently, global environmental governance has become a crucial challenge that relevant stakeholders must address from the perspective of global governance. It is essential to adhere to the commitments made in the Paris Agreement on climate change and implement the global greenhouse gas (GHG) reduction targets. This necessitates the collective responsibility of all regions to reduce their GHG emissions, prompting the need to accelerate the adjustment of the economic structure. However, it is important to acknowledge that participating in GHG reduction efforts can lead to economic emission reduction costs and increased uncertainties for the economic development of various countries. These factors might hinder the sustainable growth of regional economies and potentially diminish the enthusiasm of each region to engage in GHG reduction initiatives. Therefore, alongside actively responding to climate change, promoting the optimization and adjustment of regional economies has become a consensus among all countries.
