the book presents the latest power conversion and control technology in modern wind energy systems it has nine chapters covering technology overview and market survey electric generators and modeling power converters and modulation techniques wind turbine characteristics and configurations and control schemes for fixed and variable speed wind energy systems the book also provides in depth steady state and dynamic analysis of squirrel cage induction generator doubly fed induction generator and synchronous generator based wind energy systems to

illustrate the key concepts and help the reader tackle real world issues the book contains more than 30 case studies and 100 solved problems in addition to simulations and experiments the book serves as a comprehensive reference for academic researchers and practicing engineers it can also be used as a textbook for graduate students and final year undergraduate students

mobile manipulators combine the advantages of mobile platforms and robotic arms extending their operational range and functionality to large spaces and remote demanding and or dangerous environments they also bring complexity and difficulty in dynamic modeling and control system design however advances in nonlinear system analysis and control system design offer powerful tools and concepts for the control of mobile manipulator systems fundamentals in modeling and control of mobile manipulators presents a thorough theoretical treatment of several fundamental problems for mobile robotic manipulators the book integrates fresh concepts and state of the art results to systematically examine kinematics and dynamics motion generation feedback control coordination and cooperation from this treatment the authors form a basic theoretical framework for a mobile robotic manipulator that extends the theory of nonlinear control and applies to more realistic problems drawing on their research over the past ten years the authors propose novel control theory concepts and techniques to tackle key problems topics covered include kinematic and dynamic modeling control of nonholonomic systems path planning that considers motion and manipulation hybrid motion force control and hybrid position force control where the mobile manipulator is required to interact with environments and coordination and cooperation strategies for multiple mobile manipulators the book also includes practical examples of applications in engineering systems this timely book investigates important scientific and engineering issues for researchers and engineers working with either single or multiple mobile manipulators for larger operational space better cooperation and improved productivity

this book features the latest theoretical results and techniques in the field of guidance navigation and control gnc of vehicles and aircrafts it covers a wide range of topics including but not limited to intelligent computing communication and control new methods of navigation estimation and tracking control of multiple moving objects manned and autonomous unmanned systems guidance navigation and control of miniature aircraft and sensor systems for guidance navigation and control etc presenting recent advances in the form of illustrations tables and text it also provides detailed information of a number of the studies to offer readers insights for their own research in addition the book addresses fundamental concepts and studies in the development of gnc making it a valuable resource for both beginners and researchers wanting to further their understanding of guidance navigation and control
