today global changes and human activities affect plants within each of the world's ecosystems plant ecology in a changing world provides a foundation for understanding how the changes underway impact structure and function in the world's major biomes while also describing how evolution has resulted in the biochemical physiological structural and life history features that shaped plants and their capacities to persist across widely contrasting environments this textbook is designed for undergraduate students and graduate students as well to serve as a resource for climate change and ecosystem scientists seeking a foundation on the principles of plant ecology and the basis of plant adaptations while many textbooks focus primarily on natural ecosystems plant ecology in a changing world also recognizes the ecological importance of invasive managed and urban ecosystems and of the ways in which ecosystems are already being impacted by both human activities and a warming planet key features replete with 450 figures that help to elucidate concepts and charts to clearly present key data boxes within chapters allow those who wish to delve into more advanced aspects of topics and of those key methodological approaches used to quantify processes highlights of key plant ecologists and of their contributions each chapter concludes with a bulleted summary enabling students to recap the key points of the chapter each chapter comes with both a list of references as well as with suggested readings allowing the student to expand their knowledge on a particular topic associated with the book is an array of supplementary materials these are available and constantly updated at plantecology site

textbook

problems of scale have exercised the minds of ecologists for many years and will continue to do so into the future this volume deals

with this subject and with mathematical approaches to improve our understanding of complex ecological systems the book also concentrates on monitoring the responses of ecosystems especially to human impacts upon them the importance of spatial separation of function at both the landscape and ecosystem level forms an important theme finally this special book focuses on large scale issues discussing in particular important applied ecological problems and how these can be managed through a variety of planning processes many examples of major ecological problems in the mainstream ecological literature are drawn from europe and north america in contrast many of the most pressing ecological problems are to be found elsewhere in the world this volume is composed of four parts according to scale objectives and application of modern ecological research part i covers emerging concepts and models in the ecosystem complex and in the landscape part ii biological responses to environmental changes pattern and process part iii ecological networking and restoration technology theory and practice and finally a summary of 8th intecol congress and possible future directions are covered in part iv

for many animals behavioural adjustments represent the first response to human modified conditions by improving reproduction and survival such adjustments can play the lead in maintaining viable populations in the face of rapid environmental change behavioural responses however can also be maladaptive and reduce individual fitness particularly if favourable reaction norms have not yet evolved because animals are encountering conditions that they have never experienced before clearly behaviour matters but how can we capitalise on our understanding of animal behaviour to improve conservation and management outcomes behavioural responses to a changing world challenges and applications a companion volume to the first edition published in 2012 examines wildlife behavioural responses to human induced environmental change through a translational lens despite considerable and growing interest in research on the topic the predictive value and practical application of what has been learned remains underappreciated and underutilized in the context of developing real world solutions to redress this the current book builds upon the foundations of the original volume but with a more applied perspective that focuses on highlighting how different forms of environmental challenges from climate change to

urbanisation influence animal behaviour and how we can effectively harness knowledge of animal behaviour to effect practical solutions to predicting and mitigating the weighty impacts of a radically changed and changing world

this comprehensive study of the intersection of death and religion offers a unique look at how religious people approach death in the twenty first century previous scholarship has largely focused on traditional beliefs and paid little attention to how religious traditions evolve in relation to their changing social context employing a sociological approach death and religion in a changing world describes how people from a wide variety of faiths draw on and adapt traditional beliefs and practices as they deal with death in modern societies the book includes coverage of newly emerging social and religious phenomena that are only just beginning to be analyzed by religion scholars such as public shrines the role of the media spiritual bereavement groups and the use of the internet in death practices

indigenous water and drought management in a changing world presents a series of global case studies that examine how different indigenous groups are dealing with various water management challenges and finding creative and culturally specific ways of developing solutions to these challenges with contributions from indigenous and non indigenous academics scientists and water management experts this volume provides an overview of key water management challenges specific to indigenous peoples proposes possible policy solutions both at the international and national levels and outlines culturally relevant tools for assessing vulnerability and building capacity in recent decades global climate change particularly drought has brought about additional water management challenges especially in drought prone regions where increasing average temperatures and diminishing precipitation are leading to water crises because their livelihoods are often dependent on the land and water indigenous groups native to those regions have direct insights into the localized impacts of global environmental change and are increasingly developing their own adaptation and mitigation strategies and solutions based on local indigenous knowledge ik many indigenous groups around the globe are also faced with mounting pressure from extractive industries like mining and forestry which further threaten their water resources the various cases presented in indigenous water
