the international new math developments between about 1950 through 1980 are regarded by many mathematics educators and education historians as the most historically important development in curricula of the twentieth century it attracted the attention of local and international politicians of teachers and of parents and influenced the teaching and learning of mathematics at all levels kindergarten to college graduate in many nations after garnering much initial support it began to attract criticism but as bill jacob and the late jerry becker show in chapter 17 some of the effects became entrenched this volume edited by professor dirk de bock of belgium provides an outstanding overview of the new math modern mathematics movement chapter authors provide exceptionally

high quality analyses of the rise of the movement and of subsequent developments within a range of nations the first few chapters show how the initial leadership came from mathematicians in european nations and in the united states of america the background leaders in europe were caleb gattegno and members of a mysterious group of mainly french pure mathematicians who since the 1930s had published under the name of a fictitious nicolas bourbaki in the united states there emerged during the 1950s various attempts to improve u s mathematics curricula and teaching especially in secondary schools and colleges this side of the story climaxed in 1957 when the soviet union succeeded in launching sputnik the first satellite undoubtedly this is a landmark publication in education the foreword was written by professor bob moon one of a few other scholars to have written on the new math from an international perspective the final epilogue chapter by professor geert vanpaemel a historian draws together the overall thrust of the volume and makes links with the general history of curriculum development especially in science education including recent globalization trends

icmi or imuk was founded in 1908 and initiated the establishment of national subcommissions to launch national activities in response to the imuk agenda and to promote the reform proposals within each member country while icmi s activities were thoroughly studied the activities of the national subcommissions are studied only very marginally in the meantime their work has been of major importance both because of their role in exploring and documenting the development of mathematics education at the beginning of the 20th century and because of the changes and new ideas which they brought to their countries importantly even if some results of their activities were analyzed within their countries in the corresponding languages almost nothing is known internationally this book is planned to deepen our knowledge on at least some of the national subcommissions the book will interest both researchers and others interested in mathematics education and its development
