the study guide provides a complete review of each chapter with outlines learning objectives a fill in the blank review of key terms and multiple choice questions

our purpose in assembling the papers in this collection is to introduce readers to studies of normal and abnormal behavior in chinese culture we want to offer a sense of what psychiatrists and social scientists are doing to advance our understanding of this subject including what findings are being made what questions researched what conundrums worried over since our fund of knowledge is obviously incomplete we want our readers to be aware of the limits to what we know and to our acquisition of new knowledge although the subject is too vast and uncharted to support a comprehensive synthesis in a few areas e.g. psychiatric epidemiology enough is known for us to be able to present major reviews the chapters themselves cover a variety of themes that we regard as both intrinsically interesting and deserving of more systematic evaluation many of the issues they address we believe to be valid concerns for comparative cross cultural studies no attempt is made to artificially integrate these chapters since the editors wish to highlight their distinctive interpretive frameworks as evidence of the rich variety of approaches that scholars take to this subject we see this volume as a modest and self consciously limited exploration here are some accounts and interpretations but by no means all of normal and abnormal behavior in the context of chinese culture that we believe fashion a more discriminating understanding of at least a few important aspects of that subject

originally published in 1976 and on the basis of extended case histories eysenck showed how experts dealt with problems which arose in the course of behaviour therapy it showed how they formulated hypotheses about causation and treatment and used these to structure the methods employed and how they changed their hypotheses when treatment showed them to have been mistaken the prime aim was to demonstrate the complexities involved in even apparently simple cases and the need to base treatment on a proper understanding of the dynamics of the case all the articles were specially written for this book the purpose being to underline the need to state the dynamics of a case in such a form that they could be used as hypotheses leading to specific treatment recommendations the hypotheses were tested by the success or failure of the treatment thus making the treatment of individual patients a proper experimental procedure behaviour therapy emphasises the fundamental importance of the outcome problem and only experience can teach the behaviour therapist just how this interplay of theory formulation and design of location evaluation of effect and changes in theory works in actual practice the book will help those engaged in this type of therapy to understand the process better and to gain a quicker mastery of the technique
