the so called great recession that followed the global financial crisis at the end of 2007
 was the largest economic downturn since the 1930s for most rich countries to what
 extent were household incomes affected by this event and how did the effects differ
 across countries this is the first cross national study of the impact of the great recession
 on the distribution of household incomes looking at real income levels poverty rates and
 income inequality it focusses on the period 2007-9 but also considers longer term
 impacts three vital contributions are made first the book reviews lessons from the past
 about the relationships between macroeconomic change and the household income
 distribution second it considers the experience of 21 rich oecd member countries
 drawing on a mixture of national accounts and labour force and household survey data

third the book presents case study evidence for six countries germany ireland italy sweden the uk and the usa the book shows that between 2007 and 2009 government support through the tax and benefit system provided a cushion against the downturn and household income distributions did not change much but after 2009 there is likely to be much greater change in incomes as a result of the fiscal consolidation measures that are being put into place to address the structural deficits accompanying the recession the book s main policy lesson is that stabilisation of the household income distribution in the face of macroeconomic turbulence is an achievable policy goal at least in the short term
