we have 118 known chemical elements as our palette in our context of sustaining our world our context is considered in terms of the four spheres of the ancient world earth air fire and water this book shows how chemical principles can be used to understand the pressures on our world spanning from greenhouse emissions through freshwater supplies to energy generation and storage the supply of the chemical elements is key to their contribution to alleviating these

pressures most synthetic and radioactive elements are not available in sufficient supply to contribute in this some solutions such as wind turbines batteries fuel cells and automotive exhaust remediation pose questions about sustainable supplies of critical elements with an eye on the target of the ipcc of capping the temperature anomaly to 1.5 °c rcp2.6 options for carbon capture and storage and the generation of energy and element supply from the sea are assessed the consequences of the escape of plastics and pharmaceuticals into the wider environment for water integrity are also considered this book is designed around providing a one semester course for students who have entered at least the second level of university chemistry it provides explanations and entries to current environmental issues for students of environmental science it provides an understanding of the chemical principles underpinning the causes and possible solutions to these issues each chapter has a set appropriate study questions a study guide is available for the book

this book describes the concepts and application of model based development mbd model transformations and agile mbd to a wide range of software systems it covers systems requirements engineering system specification and design verification reuse and system composition in the context of agile mbd examples of applications in finance system migration internet systems and software refactoring are given an established open source mbd technology uml rsrcs is used throughout to illustrate the concepts the book is suitable for industrial practitioners who need training in agile mbd and those who need to understand the issues to be considered when introducing mbd in an industrial context it is also suitable for academic researchers and for use as text for undergraduate or postgraduate courses in mbd examples for educational use of uml rsrcs are included in the book

this book contains contributions from several international authors to topics of current interest such as ai intelligent systems and logic applications in different branches of knowledge foundational aspects of the various techniques are also covered notably non classical formalisms the tome is intended for researchers undergraduate and graduate students and lay readers the book is dedicated to researcher seiki akama on his sixtieth birthday akama is one of the critical scientists who dedicated himself to understanding the use of alternative logic in the various issues of ai ranging from its foundations to concrete applications and philosophical reflections
