the key to good primary teaching of numeracy and mathematics is confidence in mathematical knowledge and its relevance to the real world in particular effective implementation of the national numeracy strategy requires student teachers primary teachers and mathematics coordinators to realize the place of mathematics across the range of national curriculum subjects this book explores mathematics as a set of tools for thinking about designing evaluating and changing the world of the child through the broader curriculum rather than focusing on skills and concept building exclusively in the mathematical world practical activities are included to stimulate readers to apply these ideas with confidence both within and beyond the mathematics lesson

in their chapter on numeracy the authors begin by exploring the many terms used to describe the learning of mathematics by adults they discuss the relationship between the terms mathematics and numeracy and explain why numeracy making meaning with numbers and mathematical processes is the term they chose for their overview moving on to examine adult numeracy education in the u s the authors find that little attention is paid to the development of math skills among adults in adult basic education abe research but that adult numeracy education is prominent in practice they highlight the development of practitioner groups that share ideas promote improvement in practice and influence curriculum development at state local and national levels further they discuss influences on math education e g ged exams and commercially produced workbooks and discuss the place of numeracy in policy documents including the national reporting system and equipped for the future content standards given the relative paucity of work pertaining to adult numeracy education the authors look to k 12 math education they highlight areas of research including constructivist models gender and ethnomathematics street math and note lessons to be drawn from k 12 research on math education in addition they note important policy developments such as the national council of teachers of mathematics nctm standards which continue to influence math education at the k 12 and abe levels beyond the u s they discuss research initiatives and international efforts to understand and

promote effective adult numeracy education drawing from examples in australia the netherlands and the u k they discuss efforts in the areas of curriculum and instruction assessment and teacher support and professional development in addition they note successful efforts to embed numeracy in curriculum and assessment frameworks and instructional materials and to involve math educators in their creation the authors conclude the chapter with the need for future research to focus on issues of cognition and the numeracy demands of society and ways adults can meet those demands in the policy arena the authors recommend including numeracy practitioners in the development of abe policies building an understanding among the public of the importance of numeracy skills and coordinating efforts to improve and support adult numeracy education at federal state and local levels contains 12 notes chapter 5 in annual review of adult learning and literacy volume 3 copublished with john wiley sons inc see ed478329

numeracy i.e. one's practical understanding of mathematics in context is one of the strongest predictors of people's general decision making skill independent of other cognitive abilities e.g. intelligence working memory attentional control despite notable scientific progress on the nature of numeracy and decision making the cognitive and decision sciences have yet to investigate individual differences in numeracy components e.g. algebra versus probability in this dissertation i report on my efforts to develop new measurement technology and quantitative models of cognitive and decision skills analyses include the first known investigations of the relations between the major adult component numeracy skills and general decision making skills specifically study 1 built on an established theoretical framework from adult education and used a two parameter logistic irt model to create the berlin numeracy components test bnt c for college educated samples behavioral and analytic results indicated that the test efficiently measured full scale adult numeracy and component numeracy skills i.e. operations probability geometry and algebra with superior psychometric performance e.g. difficulty discriminability and sensitivity in study 2 i investigated the links between the bnt c other numeracy tests general cognitive abilities e.g. intelligence cognitive impulsivity and general decision making skills e.g. adult decision making competencies risk literacy predictive modeling of behavioral data revealed that with few exceptions the bnt c explained all types of decision skill better than any other individual ability assessment e.g. intelligence v impulsivity v other numeracy tests the bnt c additionally outperformed the optimal linear combination of all combined ability tests when predicting overall general decision making skill a finding that is consistent with a causal cognitive account of the relations between numeracy and general decision making skill in accord with leading theory component analyses indicated that operations and probability skills were robustly and uniquely tied to risk literacy and to nearly all general decision making sub skill competencies independent of the influence of other cognitive abilities e.g. intelligence analyses also provided the first evidence that algebra and geometry sub skills are uniquely linked to some essential general decision skills in educated adults e.g. confidence calibration sunk costs ratio bias discussion focuses on theoretical implications and factor analytic modeling of the relations between numeracy its component skills and superior decision making adaptive test construction and potential applications in training and personalized decision support are also briefly discussed
