These initial exercises focus on creating tables defining relationships and understanding data integrity

Exercise 1 Designing a Customer Database Task

Create a database for a small business Include tables for Customers CustomerID FirstName LastName Address City State ZipCode PhoneNumber Email Orders OrderID CustomerID OrderDate TotalAmount and OrderItems OrderItemID OrderID ProductID Quantity Price Define appropriate data types and primary keys Establish relationships between the tables

Answer The Customer table should have CustomerID as its primary key AutoNumber The Orders table should have OrderID as its primary key AutoNumber and a foreign key relationship with CustomerID in the Customer table The OrderItems table has OrderItemID as its primary key AutoNumber and foreign key relationships with OrderID from the Orders table and ProductID assuming a Products table exists which youd create similarly

Data types should be chosen appropriately eg Text for names Number for IDs and amounts Date for OrderDate Enforce referential integrity to prevent orphaned records

Tip Use descriptive field names and consistent naming conventions throughout your database Avoid spaces and special characters in field names

2 Exercise 2 Data Entry and Validation Task

Populate the tables created in Exercise 1 with sample data Implement input masks and validation rules to ensure data consistency eg phone number format zip code length

Answer Manually enter data into the tables In the table design view apply input masks eg 999 0000000 for phone numbers and validation rules eg LenZipCode5 for zip codes Test your validation rules to ensure they function correctly

Tip Use the Import feature in Access to efficiently load data from external sources like CSV or Excel files

II Intermediate Exercises Querying and Reporting

These exercises delve into the heart of database manipulation querying and generating reports

Exercise 3 Simple Select Queries Task

Write queries to retrieve the following information All customers from a specific state All orders placed on a particular date The total amount spent by each customer

Answer Use the Query Design view For the first query use a WHERE clause WHERE State CA For the second use a WHERE clause on the OrderDate field For the third use a GROUP BY clause on CustomerID and a SUM aggregate function on TotalAmount

Exercise 4 Advanced Queries Joins and Subqueries Task

Retrieve the names of customers who have placed orders totaling more than 1000

Subquery Retrieve the product names and quantities ordered for a specific order

Join **Answer** For the first task use a

subquery in the WHERE clause to find customers whose total order amount exceeds 1000 For the second task create a query that joins the Orders and OrderItems tables using the OrderID field Tip Use aliases to improve query readability especially when dealing with multiple tables

Exercise 5 Creating Reports Task Design reports to display 3 A list of all customers with their contact information A summary of orders for a specific month including the total amount for each order A report showing the quantity of each product sold Answer Use the Report Wizard or Report Design view to create reports Use grouping and summarizing features to create the required summaries

III Advanced Exercises Forms and Macros These exercises introduce user interfaces and automation

Exercise 6 Creating Forms Task Create forms for adding editing and deleting customer records Incorporate validation rules and input masks to maintain data integrity Answer Use the Form Wizard or Form Design view to create forms linked to the Customer table Include appropriate controls text boxes buttons etc and incorporate validation rules from previous exercises Tip Use Navigation controls to allow users to easily move between records

Exercise 7 Building Macros Task Create a macro to automate the process of backing up the database Schedule the macro to run regularly Answer Create a macro containing the TransferDatabase action to copy the database to a backup location Use the Access scheduler to schedule the macro to run daily or weekly Tip Use descriptive macro names and comments to make your macros easier to understand and maintain
