why do states still need diplomats despite instantaneous electronic communication and rapid global travel the importance of ambassadors and embassies has in many ways grown since the middle of the nineteenth century however in theories of international relations diplomats are often neglected in favor of states or leaders or they are dismissed as old fashioned david lindsey develops a new theory of diplomacy that illuminates why states find ambassadors indispensable to effective intergovernmental interaction he argues that the primary diplomatic challenge countries face is not simply communication it is credibility diplomats can often communicate credibly with their host countries even when their superiors

cannot because diplomats spend time building the trust that is vital to cooperation using a combination of history game theory and statistical analysis lindsey explores the logic of delegating authority to diplomats he argues that countries tend to appoint diplomats who are sympathetic to their host countries and share common interests with them ideal diplomats hold political preferences that fall in between those of their home country and their host country and they are capable of balancing both sets of interests without embracing either point of view fully delegated diplomacy is based on a comprehensive dataset of more than 1 300 diplomatic biographies drawn from declassified intelligence records as well as detailed case studies of the u s ambassadors to the united kingdom and germany before and during world war i it provides a rich and insightful account of the theory and practice of diplomacy in international relations
