the modern development of medicine has been characterized by the grow ing use of new
technologies in health care delivery and research as an empirical science medicine is based
on many types and quantities of information to recognize alterations explore causes and apply
cor rective action dealing with biological objects signals have to be collected processed and
interpreted to recognize the state of this object it is therefore understandable that data
processing technology and informatics have been employed to a growing extent in medicine
the increasing economic repercussions of modern medicine lead also to the demand of ways
and means to assess the system as such and to develop means for evaluation and regulation
however the application of data processing to the medical field has very often grown in parallel
to and remote from the development of in formatics and data processing in general
furthermore difficulties have occurred resulting from the differing concepts of reasoning deci
sion making and methodology we therefore decided to start a series of seminars with the

attempt to bring scientists from both medicine and informatics together to discuss basic principles of informatics and medicine and to attempt a synthesis between the problems in medicine and health care delivery and methods in informatics to approach a solution of these problems this volume contains the lecture notes of the first seminar of this type
