this book focuses on the state of the art developments in machining with nanomaterials numerous in depth case studies illustrate the practical use of nanomaterials in industry including how thin film nanostructures can be applied to solving machining problems and how coatings can improve tool life and reduce machining costs in an environmentally acceptable way chapters include discussions on among other things comparisons of re coated cutting tools and re ground drills the modeling and machining of medical materials particularly implants for optimum biocompatibility including corrosion resistance bio adhesiveness and

elasticity recent developments in machining difficult to cut materials as well as machining brittle materials using nanostructured diamond tools spindle speed variation ssv for machining chatter suppression nano grinding with abrasives to produce micro and nano fluidic devices the importance of proper design of cutting tools including milling tools single point turning tools and micro cutting tools is reinforced throughout the book this is an ideal book for engineers in industry practitioners students teachers and researchers

numerical methods in geotechnical engineering ix contains 204 technical and scientific papers presented at the 9th european conference on numerical methods in geotechnical engineering numge2018 porto portugal 25 27 june 2018 the papers cover a wide range of topics in the field of computational geotechnics providing an overview of recent developments on scientific achievements innovations and engineering applications related to or employing numerical methods they deal with subjects from emerging research to engineering practice and are grouped under the following themes constitutive modelling and numerical implementation finite element discrete element and other numerical methods coupling of diverse methods reliability and probability analysis large deformation large strain analysis artificial intelligence and neural networks ground flow thermal and coupled analysis earthquake engineering soil dynamics and soil structure interactions rock mechanics application of numerical methods in the context of the eurocodes shallow and deep foundations slopes and cuts supported excavations and retaining walls embankments and dams tunnels and caverns and pipelines ground improvement and reinforcement offshore geotechnical engineering propagation of vibrations following the objectives of previous eight thematic conferences 1986 stuttgart germany 1990 santander spain 1994 manchester united kingdom 1998 udine italy 2002 paris france 2006 graz austria 2010 trondheim norway 2014 delft the netherlands numerical methods in geotechnical engineering ix updates the state of the art regarding the application of numerical methods in geotechnics both in a scientific perspective and in what concerns its application for solving practical boundary value problems the book will be much of interest to engineers academics and professionals involved or interested in geotechnical engineering this is volume 2 of the numge 2018 set

in many machining operations burrs cannot be avoided they can affect the functionality and the safe handling of the workpiece in the subsequent processing and have to be removed by a special deburring process toleration of burrs which are not part of functional edges depends on their respective shape and size high inspection effort is necessary to guarantee the workpiece quality therefore the research results on burrs with a focus on burr analysis and control as well as on cleanability and burr removal based on the presentations held at the conference are valuable for researchers and engineers in manufacturing development

socketed axes were widespread in the irish bronze age associated with a range of industrial domestic and ritual activities reflected in the enormous variety of axe sizes something that is immediately evident from eogan s typology and illustrated catalogue
