the use of artificial intelligence ai in various fields is of major importance to improve the use of resources and time this book provides an analysis of how ai is used in both the medical field and beyond topics that will be covered are bioinformatics biostatistics dentistry diagnosis and prognosis smart materials and drug discovery as they intersect with ai also an outlook of the future of an ai assisted society will be explored

this book is concerned with artificial intelligence ai concepts and techniques as applied to industrial decision making control and automation problems the field of ai has been expanded enormously during the last years due to that solid theoretical and application results have accumulated during the first stage of ai development most workers in the field

were content with illustrations showing ideas at work on simple problems later as the field matured emphasis was turned to demonstrations that showed the capability of ai techniques to handle problems of practical value now we arrived at the stage where researchers and practitioners are actually building ai systems that face real world and industrial problems this volume provides a set of twenty four well selected contributions that deal with the application of ai to such real life and industrial problems these contributions are grouped and presented in five parts as follows part 1 general issues part 2 intelligent systems part 3 neural networks in modelling control and scheduling part 4 system diagnostics part 5 industrial robotic manufacturing and organizational systems part 1 involves four chapters providing background material and dealing with general issues such as the conceptual integration of qualitative and quantitative models the treatment of timing problems at system integration and the investigation of correct reasoning in interactive man robot systems

communication is vital for social participation however communication often takes place under suboptimal conditions this makes communication harder and less reliable leading at worst to social isolation in order to promote participation it is necessary to understand the mechanisms underlying communication in different situations human communication is often speech based either oral or written but may also involve gesture either accompanying speech or in the form of sign language for communication to be achieved a signal generated by one person has to be perceived by another person attended to comprehended and responded to this process may be hindered by adverse conditions including factors that may be internal to the sender e g incomplete or idiosyncratic language production occur during transmission e g background noise or signal processing or be internal to the receiver e g poor grasp of the language or sensory impairment the extent to which these factors interact to generate adverse conditions may differ across the lifespan recent work has shown that successful speech communication under adverse conditions is associated with good cognitive capacity including efficient working memory and executive abilities such as updating and inhibition further frontoparietal networks associated with working memory and executive function have been shown to be activated to a greater degree when it is harder to achieve speech comprehension to date less work has focused on sign language communication under adverse conditions or the role of gestures accompanying speech communication under adverse conditions it has been proposed that the role of working memory in communication under such conditions is to keep fragments of an incomplete signal in mind updating them as appropriate and inhibiting irrelevant information until an adequate match can be achieved with lexical and semantic representations held in long term memory recent models of working memory highlight an episodic buffer whose role is the multimodal integration of information from the senses and long term memory it is likely that the episodic buffer plays a key role in communication under adverse conditions the aim of this research topic is to draw together multiple perspectives on communication under adverse conditions including empirical and theoretical approaches this will facilitate a scientific exchange among individual scientists and groups studying different aspects of communication under adverse conditions and or the role of cognition in communication as such this topic belongs firmly within the field of cognitive hearing science exchange of ideas among scientists with different perspectives on these issues will allow researchers to identify and highlight the way in which different internal and external factors interact to make communication in different modalities more or less successful across the lifespan such exchange is the forerunner of broader dissemination of results which ultimately may make it possible to take measures to reduce adverse conditions thus facilitating communication such measures might be implemented in relation to the built environment the design of hearing aids and public awareness
