drawing on the corporate and national archives of the former czechoslovakia this important volume contributes to the debate on the circulation of technical and organisational knowledge in twentieth century europe fava examines in depth the transfer of fordist practices from the us to central europe using Škoda auto the leading czechoslovak car manufacturer as a case study covering the

1918-68 period marked by the growing influence of the American model of mass production and also by the sovietisation of the Czechoslovak society and industry. Fava examines how the stratification of foreign technical and organisational knowledge shaped the Czechoslovak car production practices contributing to the formation of a specific technical and organisational culture along with the questions typical of company cases in business history and relative to Škoda corporate structure, performance, production processes and product quality. This much needed study also addresses the issue of the Communist Party's controversial approach to mass motorisation.

The automobile sector is one of the most archetypal global industries and is seen by many as one of the main drivers behind the homogenisation of world markets due to firms' internationalization strategies and the social practices that firms impose. This book argues that this is not entirely the case due to the heterogeneity of firms and the diversity of strategies pursued. It highlights the diversity and forms of internationalization and the preference for regionalization rather than globalization that has occurred over the past decade. This book looks specifically at the American and Asian car industry.
