reliability theory has become one of the important areas in operational research and systems engineering any system analysis in order to be complete must give due consideration to system reliability and availability a system designer is often faced with the problems of evaluation and improvement of system reliability and determination of optimum preventive maintenance schedule in the solution of these problems he is largely aided by mathematical models these models have received considerable attention in the past several years following the satellite era the monographs of Gnedenko Belyayev and Solov'yev and Barlow and Proschan describe the state of art of the subject up to 1965 and are largely responsible for the further work in the subject the large number of papers and surveys that have appeared subsequently in journals devoted to operational research industrial engineering and statistical quality control amply demonstrate the overwhelming importance of the subject in contexts other than satellite and space craft research while there are very many important problems that stem from these models attention has been largely confined to calculations of reliability of the system in a lighter vein the authors feel that the original papers in the area have a common feature objective orientedness the general theme of operational research and in general it is carried too far and to a high degree of meticulousness

thus there is a general need for a cogent account of all the results that have appeared in the literature

textbook on maintenance management in industrial engineering deals with terotechnological aspects of maintenance engineering regarding industrial equipment presents an introduction to failure statistical tables and reliability engineering scrutinizes pertinent management techniques such as network analysis spare parts control condition based maintenance etc and includes three case studies based on experiences in industrial enterprises in the uk illustrations and references
