microarray technology is a major experimental tool for functional genomic explorations and will continue to be a major tool throughout this decade
and beyond the recent explosion of this technology threatens to overwhelm the scientific community with massive quantities of data because
microarray data analysis is an emerging field very few analytical models currently exist methods of microarray data analysis ii is the second book in

this pioneering series dedicated to this exciting new field in a single reference readers can learn about the most up to date methods ranging from data normalization feature selection and discriminative analysis to machine learning techniques currently there are no standard procedures for the design and analysis of microarray experiments methods of microarray data analysis ii focuses on a single data set using a different method of analysis in each chapter real examples expose the strengths and weaknesses of each method for a given situation aimed at helping readers choose appropriate protocols and utilize them for their own data set in addition web links are provided to the programs and tools discussed in several chapters this book is an excellent reference not only for academic and industrial researchers but also for core bioinformatics genomics courses in undergraduate and graduate programs

a valuable new edition of a standard reference the use of statistical methods for categorical data has increased dramatically particularly for applications in the biomedical and social sciences an introduction to categorical data analysis third edition summarizes these methods and shows readers how to use them using software readers will find a unified generalized linear models approach that connects logistic regression and loglinear models for discrete data with normal regression for continuous data adding to the value in the new edition is illustrations of the use of r software to perform all the analyses in the book a new chapter on alternative methods for categorical data including smoothing and regularization methods such as the lasso classification methods such as linear discriminant analysis and classification trees and cluster analysis new sections in many chapters introducing the bayesian approach for the methods of that chapter more than 70 analyses of data sets to illustrate application of the methods and about 200 exercises many containing other data sets an appendix showing how to use sas stata and spss and an appendix with short solutions to most odd numbered exercises written in an applied nontechnical style this book illustrates the methods using a wide variety of real data including medical clinical trials environmental questions drug use by teenagers horseshoe crab mating basketball shooting correlates of happiness and much more an introduction to categorical data analysis third edition is an invaluable tool for statisticians and biostatisticians as well as methodologists in the social and behavioral sciences medicine and public health marketing education and the biological and agricultural sciences
