cfD results are subject to considerable uncertainty associated with the operating conditions even when the operational uncertainty is omitted under very controlled circumstances during wind tunnel experiments substantial disagreement between experimental and cfd results persists this discrepancy must be attributed to model uncertainty this report discusses the various sources of uncertainty the need for advanced uncertainty modeling is illustrated by means of a computationally inexpensive 1 d burgers equation model we specifically address the uncertainty due to missing variables inexact or incomplete differential equations to this extent a random field model is used for the viscosity and the fundamental

differences between the solutions of the stochastic differential equations and a simple random variable model is highlighted the burgers equation theoretically needs to be integrated over an infinite domain in a deterministic approach the integration domain is cut off at some far field boundary this truncation effectively ignores all variability outside this far field boundary we present a practical treatment for the uncertainty on the boundary conditions the results indicate that ignoring the boundary condition uncertainty dramatically underestimates the variance of the velocity  $u_x$  in the interior of the domain

the physical planning financing economics marketing and environmental issues of wind energy are reviewed in detail in this two part proceedings part i of the conference contains all the papers presented in the specialist parallel sessions part ii contains all invited lectures all reports presented by special reporters on parallel sessions plus a summary of discussions on the papers contained in part i the technology is maturing wind turbines are being produced in greater numbers and experience of wind plant operation is growing as solutions are found to the early technology problems other issues equally important for the widespread implementation of wind power are coming to light both volumes will prove an indispensable reference source for all those interested in the latest technical progress in this field as well as initiating and guiding future research activities
