The official publication of the Air Surface Transport Nurses Association. This comprehensive and timely text is the standard reference for flight nurses and other health professionals involved in medical transportation. Each clinical chapter covers epidemiology, anatomy and physiology, and/or pathophysiology and specific conditions.

The desirability and feasibility of slant airways in airport terminal areas are considered with regard to aircraft performance and capability in climb and descent, as well as navigation accuracy. Present-day traffic control procedures are evaluated. The impact of slant airways on flight planning, flight procedures, and traffic control techniques is discussed. These considerations, together with aircraft pilot capabilities and navigation accuracy, are then considered as interlocking factors that determine the requirements of a terminal area slant airway complex. The problems of three-dimensional displays for the ground controller are surveyed. The possibilities are evaluated of introducing a limited number of slant airways using present very high frequency omnidirectional radio range air traffic control VORTAC equipment to provide climb-descent corridors for military interceptors and unrestricted descent airways for the supersonic transport. Finally, the aspects of automatic flight and terminal area sequencing relative to slant airways are reviewed. Author.

Issues for inclusion: Annual Air Transport Progress Issue.
