describes the physical characteristics of the composite family of plants how they  
reproduce their distribution and various uses for some of them

flavonoids are secondary plant products that have previously been shown to be helpful in  
determining relationships among plant groups this work presents comprehensively the  
occurrence patterns of variation and systematic and evolutionary importance of flavonoids  
in the sunflower family asteraceae the largest family of flowering plants 23 000 species it  
gathers together the more than 2500 reports of flavonoids in asteraceae published  
between 1950 to the present and interprets these data in context of new taxonomic  
especially generic alignments the authors discuss flavonoid patterns with reference to  
modern phylogenetic studies based on morphology and dna data this book provides

therefore the most exhaustive synthesis and evaluation of the systematic and evolutionary import of flavonoids ever accomplished for any large family of angiosperms
